In 1998, Boeing again heavily revised the 737, with the 600, 700, 800 and 900 variants, designated "NG" (Next Generation). These aircraft featured FADEC controlled CFM56-7 high-bypass turbofan engines, larger and more efficient wings (without winglets in some cases), a strengthened fuselage, revised avionics, and a higher cruise speed.

its glory. The book explains the Pilot Strike of 1992, the creation and success of Alliance Air (possibly India's first low-cost carrier), the operational start-up of IndiGo, India's premier and most successful low-cost carrier. Finally, it covers the safe landing at Laksh Farms, a place termed as a piece of heaven on earth! Readers will find this book more than just a memoir. There are valuable lessons of personal behaviour and integrity that are invaluable to ruminate about. In addition, the historically accurate perspectives of starting and running an airline provide valuable tips for students studying aviation management or even for executives operating in that space today.

The immediate human toll of the 1994 Flight 427 disaster was

staggering: all 132 people aboard died on a Pennsylvania hillside. The subsequent investigation was a maze of politics, bizarre theories, and shrouded answers. Bill Adair, an award-winning journalist, was granted special access to the five-year inquiry by the National Transportation Safety Board (NTSB) while its investigators tried to determine if the world's most widely used commercial jet, the Boeing 737, was really safe. Their findings have had wide-ranging effects on the airline industry, pilots, and even passengers. Adair takes readers behind the scenes to show who makes decisions about airline safety—and why.

The first book to use the unexpected discoveries of neuroscience to help us make the best decisions Since Plato,

philosophers have described the decision-making process as either rational or emotional: we carefully deliberate, or we "blink" and go with our gut. But as scientists break open the mind's black box with the latest tools of neuroscience, they're discovering that this is not how the mind works. Our best decisions are a finely tuned blend of both feeling and reason—and the precise mix depends on the situation. When buying a house, for example, it's best to let our unconscious mull over the many variables. But when we're picking a stock, intuition often leads us astray. The trick is to determine when to use the different parts of the brain, and to do this, we need to think harder (and smarter) about how we think. Jonah Lehrer arms us with the tools we need, drawing on cutting-edge research as well as the real-world experiences of a wide

range of "deciders" from airplane pilots and hedge fund investors to serial killers and poker players. Lehrer shows how people are taking advantage of the new science to make better television shows, win more football games, and improve military intelligence. His goal is to answer two questions that are of interest to just about anyone, from CEOs to firefighters: How does the human mind make decisions? And how can we make those decisions better?

Captain Power-Waters covers every aspect of commercial aviation and brings the reader to the conclusion that it is a much more perilous means of transportation than generally suspected. Most of the material in this book has never been touched upon in any previous book on air safety. The

following are a few of the subjects that are documented in this book: 1. There are no U.S. airports that have adequate firefighting procedures. 2. Mechanically impaired airliners are allowed to fly when, in reality, they should be grounded. 3. The flushing of an airline toilet has imperiled the lives of passengers aboard the plane and people on the ground. 4. The air traffic control system is near collapse caused by the "bumbling" FAA. 5. Airline pilots are not thoroughly trained to recover from all modes of flight. 6. The Boeing 737 is the most popular airliner ever built, but it is potentially the most dangerous. "Captain Power-Waters brings an understanding and appreciation of Air Traffic control from two perspectives: as a pilot operating within the system; and as someone who possesses a vast knowledge of the ATC's work." -William A.

Faville, Jr., National Air Traffic Controllers Association, President MKC. "If you are interested in the training of an airline captain, if you think your airline is safe, or if you think the FAA is totally interested in your safety, this is the book for you." -Carl T. Butterworth, Senior Captain, American Airlines, Ret. Brig. Gen., ANG. "You obviously have done an extensive job researching this topic, and more importantly, it is clear you have lived the issues. I congratulate you on your effort." -Robert Roach, Jr., General Vice President, International Association of Machinists and Aerospace Workers.

Since Mondor's times in the forties of the last century there was no other book in surgery to be written so easy and witty. Boris D. Savchuk, World Journal of Surgery This, the fifth edition of Schein's Common Sense Emergency Abdominal Surgery, builds on the reputation of the four previous editions. Already a worldwide benchmark, translated into half a dozen languages, this book guides surgeons logically through the minefields of assessment and management of acute surgical abdominal conditions. Tyro and experienced surgeons alike will benefit from the distilled wisdom contained in these pages. The direct, no-nonsense style gives clear guidance while at the same time providing amusing (or saddening) insights into our collective surgical psyche. Old chapters were

revised or rewritten and new chapters have been added, including a completely new colorectal section with its new co-editor. Finally, in an attempt to "rejuvenate" the book, Danny took over the helm while the aging Moshe was pushed down the line. Selected reviews and comments from readers of the previous edition: "What to say, perhaps the most appropriate medical book ever written." "This is written with short punchy chapters making it a very difficult book to put down." "By the end I was a total enthusiast" this is a text like no other I read. Unreservedly recommended to old and young alike. "A Must Have Book. I am about to end my chief year in general surgery residency " my copy of the first edition shows the wear of half a dozen total read throughs and probably hundreds of "referencings"...
