This highly readable direct practice text offers a practical introduction to the theories and skills necessary to engage in effective, strengths-based practice. Developed specifically to address the issues facing students as they prepare for direct practice in today's world, *Direct Practice for Social Work* interweaves diversity and social justice throughout the chapters and teaches students how to make the connections between major theories and real-world situations. Written in an engaging style by experienced authors, this text encourages the development of students' critical thinking skills while demonstrating the practical applications of theory. Highlights include chapters opening case studies, numerous case studies in each chapter, and more modeled responses, sample dialogues and exercises than are found anywhere else. Comprehensive coverage of the major theories and adherence to CSWE guidelines make this text an invaluable addition to any professional social work educational or professional library.

Offering a balanced approach to problem-solving issues in a complex and changing world, this book focuses specifically on the subject of problem solving in policing. advances in using this approach in criminal investigations, solving serial crimes, preparing for terrorism, and developing patrol officers as effective first responders to active violence.

Clinical practice related to sleep problems and sleep disorders has been expanding rapidly in the last few years, but scientific research is not keeping pace. Sleep apnea, insomnia, and restless legs syndrome are three examples of very common disorders for which we have little biological information. This new book cuts across a variety of medical disciplines such as neurology, pulmonology, pediatrics, internal medicine, psychiatry, psychology, otolaryngology, and nursing, as well as other medical practices with an interest in the management of sleep pathology. This area of research is not limited to very young and old patients—sleep disorders reach across all ages and ethnicities. *Sleep Disorders and Sleep Deprivation* presents a structured analysis that explores the following: Improving awareness among the general public and health care professionals. Increasing investment in interdisciplinary somnology and sleep medicine research training and mentoring activities. Validating and developing new and existing technologies for diagnosis and treatment. This book will be of interest to those looking to learn more about the enormous public health burden of sleep disorders and sleep deprivation and the strikingly limited capacity of the health care enterprise to identify and treat the majority of individuals suffering from sleep problems.

The primary purpose of fitness and body composition standards in the U.S. Armed Forces has always been to select individuals best suited to the physical demands of military service, based on the assumption that proper body weight and composition supports good health, physical

fitness, and appropriate military appearance. The current epidemic of overweight and obesity in the United States affects the military services. The pool of available recruits is reduced because of failure to meet body composition standards for entry into the services and a high percentage of individuals exceeding military weight-for-height standards at the time of entry into the service leave the military before completing their term of enlistment. To aid in developing strategies for prevention and remediation of overweight in military personnel, the U.S. Army Medical Research and Materiel Command requested the Committee on Military Nutrition Research to review the scientific evidence for: factors that influence body weight, optimal components of a weight loss and weight maintenance program, and the role of gender, age, and ethnicity in weight management.

Building on children's natural inclinations to pretend and reenact, play therapy is widely used in the treatment of psychological problems in childhood. This book is the only one of its kind with more than 200 therapeutic activities specifically designed for working with children and teenagers within the healthcare system. It provides evidence-based, age-appropriate activities for interventions that promote coping. The activities target topics such as separation anxiety, self-esteem issues, body image, death, isolation, and pain. Mental health practitioners will appreciate its "cookbook" format, with quickly read and implemented activities.
