Artists' new work

Given the increasing sophistication of architectural projects designed to showcase products at trade shows or to endow cultural exhibitions with a high level of visual appeal, this volume boasts imaginative, practical and low-cost designs in the field of ephemeral architecture. Featured inside Affordable Exhibition Design are exhibitions from around the world; each specifically selected for its aesthetic appeal, strength in attracting the attention of viewers, affordable construction costs, use of reusable resources and ease of implementation. Sketches, models and photographs are featured to reveal the process behind each project's development and construction, along with its spatial area, the design team who created it, its materials (both new and recycled) and cost. This comprehensive volume is an inspirational resource, and confirmation that an eye-catching exhibition can be constructed without breaking the bank.

Exhibition Design

Exhibition Design 2 describes the skills needed to become an exhibition designer, including: developing a brief and working with clients; design principles for graphics, circulation, lighting, and accessibility; presenting ideas to clients; and the practicalities of production. A wealth of visual material includes photographs of completed exhibitions by world-renowned designers, concept drawings, computer renderings, charts and tables of information—all for a wide range of exhibitions around the world, permanent and temporary, including museums and galleries, visitor centres, brand experiences, festivals and trade fairs. This second edition includes new examples, updated information on the latest digital technology, and expanded coverage of interactives and sound and film.

In the 1950s, 60s and 70s architects like Harry Seidler, Robin Boyd, Ken Woolley, Michael Dysart and Graeme Gunn applied their talents to project homes, bringing high-end design to the suburbs. Backed by Pettit & Sevit, Merchant Builders and other project builders, architects created small, deceptively simple houses which transformed the look of suburbia. Today, the distance between the architectural profession and suburban housing has never been greater, with Australia's super-sized, energy-guzzling project homes the biggest in the world. With photographs by Max Dupain, David Moore, Wolfgang Sievers and Eric Sterns alongside original plans, Designer Suburbs explores the relationship between architects, builders and affordable housing since 1900 and the lessons we can learn from twentieth-century designer suburbs.

A richly illustrated history of below-market housing in New York, from the 1920s to today A colorful portrait of the people, places, and policies that have helped make New York City livable, Affordable Housing in New York is a comprehensive, authoritative, and richly illustrated history of the city's public and middle-income housing from the 1920s to today. Plans, models, archival photos, and newly commissioned portraits of buildings and tenants by sociologist and photographer David Schalliol put the efforts of the past century into context, and the book also looks ahead to future prospects for below-market subsidized housing. A dynamic account of an evolving city, Affordable Housing in New York is essential reading for understanding and advancing debates about how to enable future generations to call New York home.

All museum activities converge in the public forum of the exhibition – regardless of whether the exhibit is held in the physical museum or is on the Web. Since the first edition of this book in 2002, there has been a world-wide explosion of new galleries and exhibition halls, and new ideas about how exhibitions should look and communicate. The definition of what an exhibition is has changed as exhibitions can now be virtual; non-traditional migratory and pop-up spaces play host to temporary displays; social media has created amazing opportunities for participatory engagement and shifted authority away from experts to the public; and as time-constrained audiences demand more dynamic, interactive, and mobile applications, museum leadership, managers, staff, and designers are rising to these challenges in innovative ways. Drawing on years of experience and top-flight expertise, Barry Lord and Maria Piacente detail the exhibition process in a straightforward way that can be easily adapted by institutions of any size. They explore the exhibition development process in greater detail, providing the technical and practical methodologies museum professionals need today. They've added new features and expanded chapters on project management, financial planning and interactive multimedia while retaining the essential content related to interpretive planning, curatorship, and roles and responsibilities. This second edition of the standby Manual of Museum Exhibitions is arranged in four parts: Why – Covering the purpose of exhibits, where exhibit ideas come from, and how to measure success Where – Covering facilities and spaces, going into details including security, and interactive spaces What – A look at both permanent collection displays, and non-collection displays, as well as virtual, participatory, temporary, travelling displays, and retail sales How – Who is involved, planning, curatorship, and content development, design, multimedia, fabrication and installation, financial planning, and project management Over 130 figures and photographs illustrate every step of the exhibit process. No museum can be without this critical, detailed guide to an essential function.

"There is no one solution to making housing affordable. Today, a host of new ideas and platforms are enabling people to own or purchase homes. ARCHHIVE BOOK No1: What is Affordable Housing? connects architects, startups, investors, entrepreneurs, and both for- and non-profit organizations that are engaging in the global affordable housing crisis by inventing new means for driving down housing prices."--Publisher website.

Archhive Book No1: What is Affordable Housing?

Published in conjunction with the exhibition "By the People: Designing a Better America" at Cooper Hewitt, Smithsonian Design Museum, New York, September 30, 2016-February 26, 2017.

The mentality that consumerism and economic growth are cure-alls is one of the biggest obstacles to real sustainability, but any change seems impossible, unthinkable. Our contemporary paradox finds us relying for our well being on consumer-driven economic growth that we actually can't afford — not in environmental, economic or social terms. Although architecture and design have long been seen as engines for consumerism and growth, increasing numbers of designers are concerned about the problems resulting from growth. But designers face a paradox of their own; in scenarios of sustainable consumption, where people consume or build significantly less, what will be left for designers to do? This book, informed by recent research into the viability of a "steady state" economy, sets an agenda for addressing the designer's paradox of sustainable consumption. The agenda includes ways that architecture and design can help transition us towards a new kind of economy that prioritizes real wellbeing rather than economic growth. Packed with examples and illustrations, the book argues that taking action, or activism, is an important but so far underexplored way for architects and designers to confront consumerism. The first chapters explore how economic growth and consumerism shape and are shaped by the professions of architecture, product, and landscape design and how we can understand the problem of consumerism as four main challenges that designers are already addressing. The book maps out the main issues surrounding the development of metrics that designers and others can use to measure wellbeing, instead of simply measuring economic growth. The second half of the book looks at how design activism works and its connection to growth and consumerist issues. These chapters examine how activist practices are financed, highlight five specific methods that designers use in working for social change, and investigate the power of these methods. The book concludes with a consideration of what design's role might be in a "post-growth" society.

Archhive Book No2: Affordable Housing

This lavishly illustrated book describes the development of 15 affordable housing projects, designed by some of the nation's most gifted architects. It shows how affordable housing can be durable, environmentally sensitive, comfortable, attractive, and economical to maintain.
