~~Special Senses Anatomy and Physiology – Nurseslabs~~

The special senses are the senses that have specialized organs devoted to them. Special senses include the following: Hearing (the ear) Sight/Vision (the eye) Smell (the nose) Taste (the tongue) The special senses have specialized sensory receptors or nerve endings. These nerve endings are present in the ears, eyes, nose and mouth.

This is a lab manual for a college-level human anatomy course. Mastery of anatomy requires a fair amount of memorization and recall skills. The activities in this manual encourage students to engage with new vocabulary in many ways, including grouping key terms, matching terms to structures, recalling definitions, and written exercises. Most of the activities in this manual utilize anatomical models, and several dissections of animal tissues and histological examinations are also included. Each unit includes both pre- and post-lab questions and six lab exercises designed for a classroom where students move from station to station. The vocabulary terms used in each unit are listed at the end of the

Anatomy Key Covers both pediatric and adult issues Beautiful full-color presentation with numerous images

Neurorehabilitation in Physical Therapy

delivers comprehensive coverage of the structure and function of the human nervous system. It also discusses normal motor development and motor control, as well as common treatment techniques in physical therapy. In order to be engaging to students, cases open each chapter, with questions about those cases appearing throughout the chapter. The text includes numerous tables, flow charts, illustrations, and multiple-choice board-style review questions and is enhanced by a roster of world-renowned clinical contributors.
