The process of showing that rocks or geologic events occaTing at different locations are of the same age is called correlation. Geologists have developed a system for correlating rocks by looking for similarities in composition and rock layer sequences at different locations.

Mr. Jensen's Mahopac Voyagers - Home

The geologic law that states that if an igneous rock melts across another layer that the igneous rock is younger than the layer of rock..... A. law of original horizontality, B. law of superposition, C. law of cross cutting.

Relative Dating of Rock Layers by Principles Flashcards ...

Help us work out the relative ages of the layers of sedimentary rocks. Remember that the younger sedimentary rocks lie on top of older ones and were horizontal when formed. It looks as though one group of layers was tilted and eroded away before new rocks were formed on top. Drag and drop the text labels next to the layer you think is being described. If you want to redo an answer, click on the box and the answer will go back to the top so you can move it to another box.

Relative rock layers | Science Learning Hub

Traditional evolutionary geology maintains that the deposition of sediments to form major rock layers often takes long periods of time. Recommended Resources Rock Strata, Fossils, and the Flood \$ 12 . 99
