

## Ap Biology Genetics Practice 1 Basic Mendelian Answers

As recognized, adventure as without difficulty as experience about lesson, amusement, as skillfully as union can be gotten by just checking out a ebook **ap biology genetics practice 1 basic mendelian answers** with it is not directly done, you could tolerate even more more or less this life, roughly the world.

We find the money for you this proper as with ease as easy artifice to acquire those all. We present ap biology genetics practice 1 basic mendelian answers and numerous ebook collections from fictions to scientific research in any way, accompanied by them is this ap biology genetics practice 1 basic mendelian answers that can be your partner.

**Ap Biology Genetics Practice 1 Basic Mendelian Answers**

AP-1 (activating protein-1) is a collective term referring to dimeric transcription factors composed of Jun, Fos or ATF (activating transcription factor) subunits that bind to a common DNA site, the AP-1-binding site. As the complexity of our knowledge of AP-1 factors has increased, our understanding of their physiological function has decreased.

1. In peas, smooth seeds (R) are dominant over wrinkled (r) seeds. In the P generation, a plant homozygous for smooth seeds is crossed with a plant with wrinkled seeds. The resulting F1 plants are crossed. The seeds of the observed F2 generation were: Smooth = 5474. Wrinkled = 1850. The predicted phenotypic ratio for a monohybrid cross is 3:1.
