Describes how a group of men and women accomplished the feat of landing men on the moon and returning them to earth.

Learn why NASA astronaut Mike Collins calls this extraordinary space race story "the best book on Apollo": this inspiring and intimate ode to ingenuity celebrates one of the most daring feats in human history. When the alarm went off forty thousand feet above the moon's surface, both astronauts looked down at the computer to see 1202 flashing on the readout. Neither of them knew what it meant, and time was running out . . . On July 20, 1969, Neil Armstrong and Buzz Aldrin became the first humans to walk on the moon. One of the world's greatest technological achievements -- and a triumph of the American spirit -- the Apollo 11 mission was a mammoth undertaking involving more than 410,000 men and women dedicated to winning the space race against the Soviets. Set amid the tensions and upheaval of the sixties and the Cold War, Shoot for the Moon is a gripping account of the dangers, the challenges, and the sheer determination that defined not only Apollo 11, but also the Mercury and Gemini missions that came before it. From the shock of Sputnik and the heart-stopping final minutes of John Glenn's Mercury flight to the deadly whirligig of Gemini 8, the doomed Apollo 1 mission, and that perilous landing on the Sea of Tranquility -- when the entire world held its breath while Armstrong and Aldrin battled computer alarms, low fuel, and other problems -- James Donovan tells the whole story. Both sweeping and intimate, Shoot for the Moon is "a powerfully written and irresistible celebration" of one of humankind's most extraordinary accomplishments (Booklist, starred review).

Few events have matched the landing of the first man on the Moon for drama and excitement. Watched live on television by 600 million people, Neil Armstrong floated down from the final step of the Eagle's ladder onto the powdery surface of the Moon, uttering the famous line, "That's one small step for man, one giant leap for mankind." The Apollo Missions relives the experience and all the drama as it unfolded, from the birth of the Apollo space programme and the very first attempts to put an American astronaut into space to Apollo 11's successful Moon landing and its celebrated final splashdown in the Pacific Ocean. Packed with awe-inspiring photographs of the space missions, astronauts, and iconic views of the Earth and the Moon, as well as technical diagrams, flight plans, and tables of statistics, The Apollo Missions tells the thrilling story of the race to the Moon.

Describes the design and construction of the lunar module, behind-the-scenes conflicts at NASA, and the drama of the Apollo Moon missions

JFK issued the historic moon landing challenge. These are the stories of the visionaries who helped America complete his vision with the first lunar landing fifty years ago. A Companion Book to the AMERICAN EXPERIENCE® Film on PBS® Going in depth to explore their stories beyond the PBS series, writer/producer Robert Stone—called “one of our most important documentary filmmakers” by Entertainment Weekly—brings these important figures to brilliant life. In 1961, President John F. Kennedy proposed the nation spend twenty billion dollars to land a man on the Moon before the end of the decade. Based on eyewitness accounts and newly discovered archival material, Chasing the Moon reveals for the first time the unknown stories of the fascinating individuals whose imaginative work across several decades culminated in America’s momentous achievement. More than a story of engineers and astronauts, the moon landing—now celebrating its fiftieth anniversary—grew out of the dreams of science fiction writers, filmmakers, military geniuses, and rule-breaking scientists. They include
• Science fiction author Arthur C. Clarke, whose writing inspired some of the key players in the Moon race. A scientific paper he wrote in his twenties led to the U.S. beating Russia in one area of space: communications satellites.
• Werner von Braun, the former Nazi military genius who oversaw Hitler’s rocket weapons program. After working on ballistic missiles for the U.S. Army, he was recruited by NASA to manage the creation of the Saturn V moon rocket.
• Astronaut Frank Borman, commander of the first mission to circumnavigate the Moon, whose powerful testimony before Congress in 1967 decisively saved the U.S. lunar program from being cancelled.
• Poppy Northcutt, a young mathematician who was the first woman to work in Mission Control. Her media exposure as a unique presence in this all-male world allowed her the freedom to stand up for equal rights for women and minorities.
• Edward Dwight, an African American astronaut candidate, recruited at the urging of the Kennedy White House to further the administration’s civil rights agenda—but not everyone welcomed his inclusion. Setting these key players in the political, social, and cultural climate of the time, and including captivating photographs throughout, Chasing the Moon focuses on the science and the history, but most important, the extraordinary individuals behind what was undoubtedly the greatest human achievement of the twentieth century.

The New York Times bestselling, “meticulously researched and absorbingly written” (The Washington Post) story of the trailblazers and the ordinary Americans on the front lines of the epic Apollo 11 moon mission. President John F. Kennedy astonished the world on May 25, 1961, when he announced to Congress that the United States should land a man on the Moon by 1970. No group was more surprised than the scientists and engineers at NASA, who suddenly had less than a decade to invent space travel. When Kennedy announced that goal, no one knew how to navigate to the Moon. No one knew how to build a rocket big enough to reach the Moon, or how to build a computer small enough (and powerful enough) to fly a spaceship there. No one knew what the surface of the Moon was like, or what astronauts could eat as they flew there. On the day of Kennedy’s historic speech, America had a total of fifteen minutes of spaceflight experience—with just five of those minutes outside the atmosphere. Russian dogs had more time in space than US astronauts. Over the next decade, more than 400,000 scientists, engineers, and factory workers would send twenty-four astronauts to the Moon. Each hour of space flight would require one million hours of work back on Earth to get America to the Moon on July 20, 1969. “A veteran space reporter with a vibrant touch—nearly every sentence has a fact, an insight, a colorful quote or part of a piquant anecdote” (The Wall Street Journal) and in One Giant Leap, Fishman has written the sweeping, definitive behind-the-scenes account of the furious race to complete one of mankind’s greatest achievements. It’s a story filled with surprises—from the item the astronauts almost forgot to take with them (the American flag), to the extraordinary impact Apollo would have back on Earth, and on the way we live today. From the research labs of MIT, where the eccentric and legendary pioneer Charles Draper created the tools to fly the Apollo spaceships, to the factories where dozens of women sewed spacesuits, parachutes, and even computer hardware by hand, Fishman captures the exceptional feats of these ordinary Americans. “It’s been 50 years since Neil Armstrong took that one small step. Fishman explains in dazzling form just how unbelievable it actually was” (Newsweek).

LONGLISTED FOR THE NATIONAL BOOK AWARD • YALSA EXCELLENCE IN NONFICTION FINALIST • A ROBERT F. SIBERT HONOR BOOK This beautifully illustrated, oversized guide to the people and technology of the moon landing by award-winning author/illustrator John Rocco (illustrator of the Percy Jackson series) is a must-have for space fans, classrooms, and tech geeks. Everyone knows of Neil Armstrong's famous first steps on the moon. But what did it really take to get us there? The Moon landing is one of the most ambitious, thrilling, and dangerous ventures in human history. This exquisitely researched and illustrated book tells the stories of the 400,000 unsung heroes—the engineers, mathematicians, seamstresses, welders, and factory workers—and their innovations and life-changing technological leaps forward that allowed NASA to achieve this unparalleled accomplishment. From the shocking launch of the Russian satellite Sputnik to the triumphant splashdown of Apollo 11, Caldecott Honor winner John Rocco answers every possible question about this world-altering mission. Each challenging step in the space race is revealed, examined, and displayed through stunning diagrams, experiments, moments of crisis, and unforgettable human stories. Explorers of all ages will want to pore over every page in this comprehensive chronicle detailing the grandest human adventure of all time!

On May 25, 1961, President John Kennedy declared: "I believe that this nation should commit itself to achieving the goal, before this decade is out, of landing a man on the moon and returning him safely to earth." Over his remaining time in the White House, JFK actively involved himself in space decisions and several times reviewed his decision to go to the Moon, each time concluding that the benefits of being the leader in space outweighed the massive costs of the lunar landing enterprise. Logsdon traces the evolution of JFK's thinking and policy up until his assassination, which brought to an end his reexamination of the program's goal and schedule and his hope to collaborate, rather than compete, with the Soviet Union in going to the Moon. This study, based on extensive research in primary documents and archival interviews with key members of the Kennedy administration, is the definitive examination of John Kennedy's role in sending Americans to the Moon.

Describes the events leading up to the Apollo 11 flight that put the first man on the moon and the technological advances that made this and later flights possible.

In 1961 President Kennedy issued a challenge to land a person on the moon and return safely to Earth before the end of the 1960s, a bold proclamation at the time, given that only one US astronaut had been to space, for just 15 minutes. The race to the moon was part of the larger Cold War between the United States and the Soviet Union, a race where the Russians appeared far ahead of the Americans. Apollo was a complicated, dangerous and expensive adventure involving 400,000 people across the nation. Before it was over, NASA had made 11 Apollo flights, six of which landed on the moon, and eight astronauts had lost their lives. But it was also fun, and the crews never missed a chance to enjoy the trip or pull off a prank 240,000 miles from home. The Apollo Missions for Kids tells the story from the perspective of those who lived it—the astronauts and their families, the controllers and engineers, the technicians and politicians who made the impossible possible.
