Approximate Calculation Of Multiple Integrals

If the integral $I(f)$ is computed by a deterministic algorithm using information about the function values and its derivatives at no more than N points then there is a function $f \in H(p, A, \epsilon)$ for which the true value of the integral differs from the one computed with a given method by at least $C \epsilon^m$, $p + \epsilon \leq A \leq N \epsilon$ ($p + \epsilon$) / m , and if a nondeterministic method is used then there is a function $f \in H(p, A, \epsilon)$ for which the average of the absolute value of the error is larger than $C \dots$

Algorithm description Theorem 1. Let the $z=f(x,y)$ function be defined and continuous in a bounded two-dimensional domain of integration. Then the cubature formula, obtained by repeated application of Simpson, has the form
$$\int_D f(x,y) dx dy \approx \frac{1}{9} \sum_{i,j} w_{ij} f(x_{ij}, y_{ij})$$

Integral Approximation Calculator

In this section we will look at several fairly simple methods of approximating the value of a definite integral. It is not possible to evaluate every definite integral (i.e. because it is not possible to do the indefinite integral) and yet we may need to know the value of the definite integral anyway. These methods allow us to at least get an approximate value which may be enough in a lot of ...

Using the same idea for all the subrectangles, we obtain an approximate volume of the solid S as $V \approx \sum_{i=1}^m \sum_{j=1}^n f(x_{ij}^*, y_{ij}^*) \Delta A$. This sum is known as a double Riemann sum and can be used to approximate the value of the volume of the solid. Here the double sum means that for each subrectangle we evaluate the function at the chosen point, multiply by the area of each rectangle, and then add all the results.

Adaptive algorithms are now used widely for the numerical calculation of multiple integrals. These algorithms have been developed for a variety of integration regions, including hyper-rectangles, spheres and simplices. In this paper we describe an algorithm for groups of integrals over a common n-dimensional hyper-rectangular region.
