ARC ' s foundation is built upon four key areas of study: normative childhood development, traumatic stress, attachment, and risk and resilience.

What is ARC? – ARC Framework

arc The Attachment, Self-Regulation, and Competency (ARC) framework (Kinniburgh & Blaustein, 2005; Blaustein & Kinniburgh, 2010) is a core-components treatment model developed to provide a guiding framework for thoughtful clinical intervention with youth who have experienced complex trauma and their caregiving systems.

ARC - Complex Trauma Treatment Network

The ARC Framework was developed for children and adolescents who have been impacted by complex trauma, and their caregiving systems. Complex trauma includes a range of stressful experiences which are typically chronic and interpersonal in nature, and may affect many different areas of a child or adolescent ' s life. ARC is both a clinical framework, used to guide treatment intervention, and an organizational framework, used to support trauma-informed care in child- and family-serving systems.
