Asthma / Brit-Thoracic

This guideline covers diagnosing, monitoring and managing asthma in adults, young people and children. It aims to improve the accuracy of diagnosis, help people to control their asthma and reduce the risk of asthma attacks. It does not cover managing severe asthma or acute asthma attacks. In February 2020,

Medicines Strategy Group*

- to reduce the risk of serious asthma-related exacerbations and death, including in patients with so-called mild asthma,
- to provide consistent messaging about the aims of asthma treatment, including prevention of exacerbations, across the whole spectrum of asthma severity
- to avoid establishing a pattern of patient reliance on SABA early in the course of the disease.

information for people in the UK.

Coronavirus (COVID-19) / Asthma UK

Asthma control focuses on two domains: (1) reducing impairment—the frequency and intensity of symptoms and functional limitations currently or recently experienced by a patient; and (2) reducing risk—the likelihood of future asthma attacks, progressive decline in lung function (or, for children, reduced lung growth), or medication side effects.
