An automatic transmission system has a valve body, which serves as the main control center. The valve body has numerous passages and channels within the valve body. It allows the flow of hydraulic fluid to different valves to direct the right clutch and switch the gear appropriately according to the driving situation. The most important part of the valve body is the manual valve.

Like other transmission systems on vehicles, it allows an internal combustion engine, best suited to run at a relatively high rotational speed, to provide a range of speed and torque outputs necessary for vehicular travel.
