~~Band Interleaved By Line Bil~~

Band interleaved by line (BIL) is one of three primary methods for encoding image data for multiband raster images in the geospatial domain, such

Access Free Band Interleaved By Line Bil

as images obtained from satellites. BIL is not in itself an image format, but is a scheme for storing the actual pixel values of an image in a file band by band for each line, or row, of the image.

~~Band Interleaved by Line (BIL) Image~~

Access Free Band Interleaved By Line Bil Encoding File

The BIL (band-interleaved-by-line) encoding is a compromise format, allowing fairly easy access to both spatial and spectral information. To be interpreted properly, a BIL binary image file must have an associated ASCII header file.
