Burnout is a state of emotional, mental, and often physical exhaustion brought on by prolonged or repeated stress. Though it's most often caused by problems at work, it can also appear in other...

Burnout | Psychology Today

Burnout is a state of emotional, physical, and mental exhaustion caused by excessive and prolonged stress. It occurs when you feel overwhelmed, emotionally drained, and unable to meet constant demands. As the stress continues, you begin to lose the interest and motivation that led you to take on a certain role in the first place.

work-related stress — a state of physical or emotional exhaustion that also involves a sense of reduced accomplishment and loss of personal identity.

"Burnout" isn't a medical diagnosis. Some experts think that other conditions, such as depression, are behind burnout.

Job burnout: How to spot it and take action - Mayo Clinic

The term "burnout" is a relatively new term, first coined in 1974 by Herbert Freudenberger, in his book, *Burnout: The High Cost of High Achievement*. He originally defined burnout as, "the extinction of motivation or incentive, especially where one's devotion to a cause or relationship fails to produce the desired results."

How to Tell You Have Reached the Point of Burnout
Burnout was first seen largely in healthcare fields, where doctors and caregivers would burn out from overwork and stress. Today, it appears to be widespread. The shift to more service- and...
