Drawn from the content of the new Ninth Edition of *Cancer: Principles and Practice of Oncology*, this unique publication brings together the basic scientific information on the molecular biology of cancer. The format is designed to be useful both to research scientists interested in the study of cancer and to oncologists who need to understand these new developments that are having a profound impact on the care of patients with cancer. Leading scientists and clinicians in the field of molecular biology and clinical oncology have lent their expertise to this project. The text has been divided into two parts. Part I includes thirteen chapters that deal with the general principles of the molecular biology of cancer that provide the basic framework for an understanding of the behavior of cancer cells. Part II includes an up-to-date description of how this new information has affected the understanding of the biology of 19 of the most common cancers, with an emphasis on how these new findings have been translated to impact the management of cancer patients. This distinctive text provides a single concise source of information for scientists and clinicians in this rapidly developing field.

DeVita, Hellman, and Rosenberg's *Cancer: Principles & Practice of Oncology*, 10th edition has garnered universal acclaim as the world's definitive, standard-setting oncology reference. This practical, user-friendly guidebook will allow the clinician to search under disease site for the hereditary cancer syndromes relevant for his/her patient's cancer. For example, a gynecologist oncologist whose patient has ovarian cancer can turn to the Ovary chapter and quickly read a summary of all of the hereditary cancer syndromes that include ovarian cancer. She can learn the questions she should be asking when expanding that patient's personal and family history, which genes are most relevant, whether to refer that patient on for genetic counseling and testing, and how to manage that patient long-term if the patient is mutation positive or negative. The same holds true for the practicing oncologist, surgeon, urologist, endocrinologist, gynecologist, primary care physician, physician's assistant, advanced practice nurse and any other clinician seeing a patient who has had cancer. This guidebook also contains an overview article on genetic counseling and testing and several in depth articles on issues that are up and coming in the field of hereditary cancer.
