Designed for the one-semester anatomy and physiology course, "Hole's Essentials of Human Anatomy and Physiology" assumes no prior science knowledge and supports core topics with clinical applications, making difficult concepts relevant to students pursuing careers in the allied health field. The unparalleled teaching system is highly effective in providing students with a solid understanding of the important concepts in anatomy and physiology.

Mitosis/Cytokinesis provides a comprehensive discussion of the various aspects of mitosis and cytokinesis, as studied from different points of view by various authors. The book summarizes work at different levels of organization, including phenomenological, molecular, genetic, and structural levels. The book is divided into three sections that cover the premeiotic and premitotic events;

Access Free Chapter 10 Biology Test Flashcards

mitotic mechanisms and approaches to the study of mitosis; and mechanisms of cytokinesis. The authors used a uniform style in presenting the concepts by including an overview of the field, a main theme, and a conclusion so that a broad range of biologists could understand the concepts. This volume also explores the potential developments in the study of mitosis and cytokinesis, providing a background and perspective into research on mitosis and cytokinesis that will be invaluable to scientists and advanced students in cell biology. The book is an excellent reference for students, lecturers, and research professionals in cell biology, molecular biology, developmental biology, genetics, biochemistry, and physiology.

Research question(s): How does scaffolding instruction of biology

Access Free Chapter 10 Biology Test Flashcards

concepts through constructing definitions and analogies influence students' understanding? (1) How do students approach the process of constructing analogies for different science concepts? (2) How does student engagement vary during in-class analogy construction and definition activities? Context: This intervention took place in a ninth grade high school biology class. Of the 29 students involved in the study, 10 were English Learners (EL) or Reclassified Fluent English Proficient (RFEP), mainly Spanish-speaking students. The study explored the use and construction of definitions and analogies to improve vocabulary development and comprehension of biological concepts. Vocabulary became a focus, because of students' low performance in vocabulary exams and chapter assessments, especially among ELs. Methods and data: Data were collected in two phases within a four-week span. In the first phase

Access Free Chapter 10 Biology Test Flashcards

for baseline data, the students were asked to match the definition to the appropriate vocabulary word. During Phase I students defined and wrote flashcards for each of the targeted vocabulary words (N=12). Prior to the test they had a chance to study the flashcards independently. During the second phase, the students were given a new set of concept words (N=13) and asked to define and construct analogies for each. The students were then given a test similar to the first. Results: Whole class scores increased from a baseline of 40% to 54% at the end of Phase I and decreased to 53% at the end of Phase II. The EL subgroup increased from a baseline of 33% to 55% at the end of Phase I and decreased to 52% at the end of Phase II. The Non-EL subgroup, increased from a baseline of 43% to 53% at the end of Phase I, and remained at 53% at the end of Phase II. There were notable increases in median scores within each

Access Free Chapter 10 Biology Test Flashcards

subgroup. Whole class scores increased from 31% to 58% at the end of Phase I and decreased to 53% at the end of Phase II. However, the EL subgroup increased from a baseline of 25% to 58% at the end of Phase I and increased to 62% at the end of Phase II. The Non-EL subgroup increased from 37% to 66% at the end of Phase I and decreased to 53% at the end of Phase II. The median score increase from baseline to the end of Phase II was greater for the EL group: 37%, compared to 16% for the Non-EL subgroup. These increases suggest that explicit instruction on vocabulary influences comprehension of concepts. The effectiveness of student-generated analogies varied depending on the complexity of the concept and the quality of the analogy. Grade level: High School 9-12. Data collection methods: Vocabulary assessment, Analogy Vocabulary Sheets, Student engagement observations, Parent survey.
