The Sultanate of Oman, at the southeastern corner of the Arabian Peninsula, borders on three different bodies of Ocean: the Arabian Sea, the Gulf of Oman and the Arabian Gulf. This beautifully illustrated book is the first to bring the diverse inshore fish fauna of Oman under one cover. Recent fieldwork by the author and colleagues has increased the number of known shore fishes (defined as those occurring in less than 200 metres) to 930, all of which are treated in this volume. A surprising 52 new species of inshore fishes of Oman (four of which required new generic names) were collected during the recent fieldwork; these had to be described in scientific papers to make the names available for this book. All of the species are illustrated, mostly in colour. The family and species accounts are written to be understood by the layman (a glossary and diagrams are provided to explain scientific terms), but with enough detail and references to serve the needs of professional biologists. Coastal Fishes of Oman will promote appreciation of the unique fish fauna of Oman, provide a much-needed inventory of this invaluable resource, and form the basis for future fisheries management.

This book is devoted to the dangerous fishes found offshore the eastern and southern Arabian Peninsula. It covers information about the main groups of dangerous fish species i.e., biting and predator fish group, venomous stinging fish, electric shock fish, harmful stinging fish, and poisonous fish. In the latter group, the book gives details about fishes that cause several types of toxicities to human. The purpose of this book is to thoroughly introduce life, nature and methods of dangerous fishes in order to form awareness about their danger and to take the proper preventive steps. It will appeal to researchers, scholars, divers, the sea coast visitors and students of marine biology as it is highly informative and carefully presented. This book is the first of its kind for the Arabian region in particular and the Middle East in general.

The second volume in the Fauna Malesiana book series gives an extensive overview of the larval development of 124 families of fishes, many of them of importance for both fishery and from ecological perspectives. The families that are described originate from the center of global marine biodiversity: the tropical Indo-Pacific Oceans, a region rich in coral reefs, as well as mangrove, estuarine, and coastal shelf habitats. The identification guide not only documents the ontogeny of these fishes but also provides the means to identify these extraordinarily diverse larvae to the level of family. The book offers a wealth of instructive and detailed figures and illustrations (219 plates, each consisting of approximately 4 figures) for enabling the identification of these families and their larval specialization.

The Arabian Seas Marine Region encompasses marine areas from Djibouti to Pakistan, including the northern part of Somalia, the Red Sea, the Arabian/Persian Gulf, and parts of the Arabian Sea. Human pressures on the coastal and marine environments are evident throughout the region, and have resulted in harmful environmental effects. Oil and domestic, urban and industrial pollutants in several areas of this part of the world have caused local habitat degradation, eutrophication and algal blooms. Further, coastal landfill, dredging, and sedimentation, as well as nutrient and sediment runoff from phosphate mining, agriculture and grazing, and reduction in freshwater seepage due to groundwater extraction are all contributing to the degradation of coastal environments. This book discusses aspects not covered in other books on the region, which largely focus on marine biodiversity, and examines several environmental challenges that are often ignored, but which have a significant impact on the environment. Evaluating the status quo, it also recommends conservation measures and examines the abiotic factors that play a major main role in the environmental changes. Lastly, the book addresses the biodiversity of the area, providing a general context for the conservation and management measures discussed.

World Seas: An Environmental Evaluation, Second Edition, Volume Two: The Indian Ocean to the Pacific provides a comprehensive review of the environmental condition of the seas from the Indian Ocean to the Pacific. Each chapter is written by experts in the field who provide historical overviews in environmental terms, current environmental status, major problems arising from human use, informed comments on major trends, problems and successes, and recommendations for the future. The book is an invaluable worldwide reference source for students and researchers who are concerned with marine environmental science, fisheries, oceanography and engineering and coastal zone development. Covers regional issues that help countries find solutions to environmental decline that may have already developed elsewhere Provides scientific reviews of regional issues, thus empowering managers and policymakers to make progress in under-resourced countries and regions Includes comprehensive maps and updated statistics in each region covered

A guide to over 400 species of the fishes along the coast of southern Africa, this work features over 600 original paintings showing changes with growth and sexual differences in colour of many of the fishes. The species accounts include descriptions and other information for identification and comparison of similar species.

Bradt's is the most up-to-date and informative guide to Oman, the Arabian peninsula's most welcoming destination, fully revised and updated by an author who has been living in Oman and Arabia since 1986. Oman is finally reaping the economic benefit of its location between Europe, Africa and Asia with substantial investment in major shipping ports and significant expansion of the national airline with new routes to Western Europe and East Asia. Despite being at the crossroads of great trade routes and empires, Oman has remained an independent country through much of its long history, and today tourism and travel are a major focus for Oman's government. This new edition covers the recent substantial investment in new airport facilities and upmarket accommodation and also features the historic UNESCO towns of Samharam and Al Balid. If you want to live like a local, the guide also tells you how to slow cook the traditional spiced meat shuwa and how to be a perfect guest if invited into an Omani home. Oman is not merely a desert. While it has the classic sand seas - Wihibah Sands - home to the nomadic Bedouin and their camels, this sultanate also boasts lush monsoon-soaked valleys near Salalah, mountain villages surrounded by green terraced fields of fruit trees and rose bushes, and the reef-fringed Ad Dimaniyyat Islands. With such a varied wilderness there is huge scope for adventure. Oman is increasingly perceived as a high-end cultural destination. The new Opera House has opened, directly supported by the Sultan, with top-notch international performers like Placido Domingo. The guide includes advice on property buying, since Omani law changed to allow expatriates to buy, explaining the rules and regulations. There is also a detailed overview of language schools teaching Arabic, not found in other guides. With advice on cultural etiquette, basic Arabic phrases and political history - as well as full practical information on where to stay and eat, and what to see and do - this fully updated edition remains the essential guide for travellers looking to discover the real Oman.
