June 21, 2018. Special needs can mean many things — from thriving with a condition that challenges a single aspect of daily life to coping with something that forces you to learn a new normal. The term “ special needs ” is used to describe a person with a physical or emotional difficulty or difference that requires more assistance or specialized services.

Special Needs: Defining And Understanding The 4 Types ...

Special education (also known as special-needs education, aided education, exceptional education, special ed. or SPED) is the practice of educating students in a way that addresses their individual differences and special needs. Ideally, this process involves the individually planned and systematically monitored arrangement of teaching procedures, adapted equipment and materials, and accessible settings.

Special education - Wikipedia

Special education, also called special needs education, the education of children who differ socially, mentally, or physically from the average to such an extent that they require modifications of usual school practices. Special education serves children with emotional, behavioral, or cognitive impairments or with intellectual, hearing, vision, speech, or learning disabilities; gifted children with advanced academic abilities; and children with orthopedic or neurological impairments.

This excellent resource provides an approach to research and evaluation that helps educators better understand and address the needs of students with various disabilities.

Providing a reasonable level of profitability through productivity is - and will remain - one of the fundamental tasks of the management teams of any production company. Manufacturing Cost Policy Deployment (MCPD) and Methods Design Concept (MDC): The Path to Competitiveness contains two new methodologies to improving the productivity and profitability of production systems that continuously increase competitiveness: Manufacturing Cost Policy Deployment (MCPD) and Methods Design Concept (MDC). Both MCPD and MDC are the result of long-time synthesis and distillation, being implemented successfully, totally or partially, in many companies. The MCPD system, developed by Alin Postec , is a manufacturing cost policy aimed at continuous cost improvement through a systemic and systematic approach. The MCPD is a methodology that improves the production flow driven by the need for Manufacturing Cost Improvement (MCI) for both existing and future products through setting targets and means to continuously improve production process productivity for each product family cost. The MDC, developed by Shigeyasu Sakamoto, design the effective manufacturing methods using a tool of engineering steps identifying ideas for increasing productivity called KAIZENSHIRO (improvable value as a target). The MDC results on production methods lead to effectiveness of work measurement for performance (P) and to knowledge and improvement of production control and planning as utilization (U), in order to achieve labor target costs. The combination of MCPD and MDC methodologies can provide a unique approach for the managers who are seeking new ways for increasing productivity and profitability to increase the competitive level of their manufacturing company.

This book explores the historical origins and institutional shape of special education across the American states. It begins with the decade of the 1840s as states anticipated the legislation of compulsory attendance laws. With these laws, the institutional beginnings of special education emerge defined by the exemption of physically and mentally handicapped youth and by the power of schools to exclude juvenile delinquent youth as well. With the passage of these laws states formalized the "rules of access" to a common schooling, thereby structuring the school age population into three segments: the common, delinquent, and special. As the worlds of delinquency and exceptionality progressively encroached upon public schools, their inclusion has been the central force behind the expansion of special education; as a structure of handicapping categories and as a professional field within education generally. This institutional expansion of special education has occurred over the past thirty years, and has reshaped public education by defining the "rules of passage."

The development of economics changed dramatically during the twentieth century with the emergence of econometrics, macroeconomics and a more scientific approach in general. One of the key individuals in the transformation of economics was Ragnar Frisch, professor at the University of Oslo and the first Nobel Laureate in economics in 1969. He was a co-founder of the Econometric Society in 1930 (after having coined the word econometrics in 1926) and edited the journal *Econometrics* for twenty-two years. The discovery of the manuscripts of a series of eight lectures given by Frisch at the Henri Poincaré Institute in March – April 1933 on *The Problems and Methods of Econometrics* will enable economists to more fully understand his overall vision of econometrics. This book is a rare exhibition of Frisch's overview on econometrics and is published here in English for the first time. Edited and with an introduction by Olav Bjerkholt and Ariane Dupont-Kieffer, Frisch's eight lectures provide an accessible and astute discussion of econometric issues from philosophical foundations to practical procedures. Concerning the development of economics in the twentieth century and the broader visions about economic science in general and econometrics in particular held by Ragnar Frisch, this book will appeal to anyone with an interest in the history of economics and econometrics.
