While most photographers shunned the hated new diesels in the 1950s and '60s, John Gilks, whose intention was deliberately to record the whole railway scene, carried on as before. The result was an enviable archive of views from the 'Green Diesel Era', showing locomotives and DMUs, most themselves since consigned to history, running on lines many of which likewise did not survive the Beeching cuts.

This overview of the leading locomotive producers in the United States during the twentieth century shows how they responded to a radical technological change: the replacement of steam locomotives by diesels. The locomotive industry provides a valuable case study of business practices and dramatic shifts in innovation patterns, since two companies--General Motors and General Electric--that had no traditional ties to locomotive production demolished established steam locomotive manufacturers. Albert Churella uses many previously untapped sources to illustrate how producers responded to technological change, particularly between the 1920s and the 1960s. Companies discussed include the American Locomotive Company (ALCo), the Baldwin Locomotive Works, the Lima Locomotive Works, Fairbanks-Morse, the Electro-Motive Division of General Motors, and General Electric. A comparative work of business history and the history of technology, the book is not a complete history of any locomotive builder, nor does it explore the origins of the diesel engine in great detail. What it does, and does superbly, is to demonstrate how managers addressed radical shifts in technology and production methods. Churella reveals that managerial culture and corporate organizational routines, more than technological competency per se, allowed some companies to succeed, yet constrained the actions of others. He details the shift from small-batch custom manufacturing techniques in the steam locomotive industry to mass-production methods in the diesel locomotive industry. He also explains that chance events and fortuitous technological linkages helped to shape competitive patterns in the locomotive industry.

This formative period of diesel locomotive evolution is examined with the help of more than 250 modern

and period photos depicting passenger, freight, and switching locomotives. Author Brian Solomon covers every prominent manufacturer of the period—including Electro-Motive, Alco, Baldwin, and GE—as well as iconic models like Geeps, E and F units, PAs and FAs, sharknoses, U-boats, and more. The photographs take in the grand geographic and technological breadth of North American railroading and are accompanied by detailed captions identifying the locomotives pictured and explaining their roles in this crucial era of American railroading.

Illustrated with rare historical photographs, Streamliners follows the various technologies and styling trends of streamlined trains to show how they changed the look of American railroading forever.

The complete history of the world's foremost locomotive builders. With roots stretching back to the turn of the twentieth century, General Electric and Electro-Motive have designed some of the most iconic locomotives in the history of North American railroading. Now, for the first time, acclaimed rail author Brian Solomon's landmark historical accounts of these manufacturers' North American machines (GE Locomotives, 2003, and EMD Locomotives, 2006) are available in a single photo-packed volume. In GE and EMD Locomotives: The Illustrated History, nearly 400 rare photographs (more than 300 of them in color) are accompanied by thorough histories of the two manufacturers, beginning with their earliest efforts in the 1890s and 1930s, respectively. Solomon brings the story up to date with afterwords detailing such recent developments as GE's revolutionary Evolution locomotives and EMD's SD70ACe and SD70M-2. From General Electric's electrical legends - the Pennsylvania Railroad's E44s, Amtrak's E60s, and Milwaukee Road's "Little Joes" - to EMD's mid-century F units, workhorse GP and SD locomotives, and Dash series, all the way through to the rivals' most cutting-edge modern "green" designs, GE and EMD Locomotives: The Illustrated History leaves nothing unexamined in the important histories of these industrial giants and the competition that continues to drive them forward.
