Desert ecology is the study of interactions between both biotic and abiotic components of desert environments. A desert ecosystem is defined by interactions between organisms, the climate in which they live, and any other non-living influences on the habitat. Deserts are arid regions that are generally associated with warm temperatures; however, cold deserts also exist.

Desert ecology - Wikipedia

In general, deserts are made up of a number of abiotic components

Unlike books that merely identify what plants and animals live in the desert, *Desert Ecology* is a comprehensive but accessible introduction to how these organisms live where they do. Beginning with an overview of the Intermountain, Mojave, Sonoran, and Chihuahuan Deserts, Sowell presents the topographic and the meteorologic conditions that created these regions.

Plant Ecology of the Sonoran Desert Region. Mark A. Dimmitt.

You could easily recognize a desert even if you were blind- folded. You would discover that you could walk fairly long distances without bumping into plants, and when you did the encounter would likely be painful. Even standing still you would have unmistakable clues about your location.

Mechanistic principles from engineering, meteorology, and soil physics are integrated with ecology and physiology to develop models for prediction of animal behavior. The Mojave Desert biome and the desert iguana are used to illustrate these principles. A transient energy balance model for animals in an outdoor environment is presented. The concepts and relationships have been tested in a wind ...

Behavioral implications of mechanistic ecology | SpringerLink

A desert ecosystem is basically devoid of any rainfall or precipitation. In short desert ecosystem is the community of living and non-living organisms living together and interacting in an environment which seems to be abandoned. A Desert ecosystem is the interaction between both the Biotic and Abiotic components of
