infectious disease has assumed global importance for life on this planet. While the causal links between environmental change and disease emergence are complex, progress in understanding these links, as well as how their impacts may vary across space and time, will require transdisciplinary, transnational, collaborative research. This research may draw upon the expertise, tools, and approaches from a variety of disciplines. Such research may inform improvements in global readiness and capacity for surveillance, detection, and response to emerging microbial threats to plant, animal, and human health. The Influence of Global Environmental Change on Infectious Disease Dynamics is the summary of a workshop hosted by the Institute of Medicine Forum on Microbial Threats in

external contingencies as population demography, social and economic factors, subsistence strategies, household composition, and by cultural ideas concerning the nature of infancy and childhood, definitions of personhood, and beliefs about the soul and its immortality. MOTHER LOVE AND CHILD DEATH Of all the many factors that endanger the lives of young children, by far the most difficult to examine with any degree of dispassionate objectivity is the quality of parenting. Historians and social scientists, no less than the public at large, are influenced by old cultural myths about childhood innocence and mother love as well as their opposites. The terrible power and significance attributed to maternal behavior (in particular) is a commonsense perception based on the observation that the human infant

(specialized as it is for prematurity and prolonged dependency) simply cannot survive for very long without considerable maternal love and care. The infant's life depends, to a very great extent, on the good will of others, but most especially, of course, that of the mother. Consequently, it has been the fate of mothers throughout history to appear in strange and distorted forms. They may appear as larger than life or as invisible; as all-powerful and destructive; or as helpless and angelic. Myths of the maternal instinct compete, historically, with myths of a universal infanticidal impulse.

This publication aims to provide a valuable and practical tool for those countries where court decisions in the

copyright domain are scarce or non-existent - either because copyright law is a fairly new phenomenon or because legislation has not been extensively applied. To that effect, this publication examines a carefully selected number of court decisions illustrating general principles of copyright law, drawn from common law, civil law and the legislative systems of Arab countries. As the basic principles illustrated here are to a large extent commonly shared, many of the cases presented have a wider relevance, going beyond the confines of the legal system of which they form a part. L'objet du présent recueil est d'offrir un outil précieux et commode aux pays dont la jurisprudence en matière de droit d'auteur est restreinte ou inexistante, soit parce que le droit d'auteur est une réalité relativement nouvelle pour

eux, soit parce que la législation en vigueur dans ce domaine n'a pas été largement appliquée. À cette fin, le présent ouvrage expose un certain nombre de décisions de justice, soigneusement sélectionnées, qui illustrent les principes généraux du droit d'auteur et qui émanent de la common law, du droit civil et des systèmes législatifs des pays arabes. Compte tenu de la valeur quasi universelle de ces principes fondamentaux, la pertinence des cas présentés va bien souvent au-delà des limites du système juridique dont ils relèvent.
