An accessible introduction to language learning research, which provides a 'feel' for what research activities are like by engaging the reader in several roles across a range of research design types, both quantitative and qualitative. Roles include research subject, research organizer, data collector, data analyst, and research reporter. The book systematically explains the characteristics and purposes of various types of research, including terminology, the logic underlying selection, and the steps typical of each type of research design. It also offers an introduction to some classic research studies.

Based on a set of four research parameters, this book discusses the development of research questions and hypotheses, naturalistic and experimental research, data collection, and validation of research instruments. Each chapter includes examples and activities.

Based on a set of four research parameters, this book discusses the development of research questions and hypotheses, naturalistic and experimental research, data collection, and validation of research instruments. Each chapter includes examples and activities.

This textbook approaches second language acquisition from the perspective of generative linguistics. Roumyana Stabakova reviews and discusses paradigms and findings from the last thirty years of research in the field, focusing in particular on how the second or additional language is represented in the mind and how it is used in communication. The adoption and analysis of a specific model of acquisition, the Bottleneck Hypothesis, provides a unifying perspective. The book assumes some non-technical knowledge of linguistics, but important concepts are clearly introduced and defined throughout, making it a valuable resource not only for undergraduate and graduate students of linguistics, but also for researchers in cognitive science and language teachers.

Donald Freeman examines how core ideas and practices in educating second language teachers relate to and differ from teacher education in other content areas. He weaves together research in general and second language teacher education with accounts of experience and practice to examine how background knowledge is defined in language teaching. Throughout, Freeman demonstrates how understanding the processes of teacher learning, knowing, thinking, and reflecting are " the same things done differently " in second language teacher education. Educating Second Language Teachers reconsiders pre- and in-service teacher education, and proposes a detailed, comprehensive design theory for teacher education. " A masterful account of the landscape of second language teacher education and the development of its theoretical assumptions and practices. It offers a unique and original conceptualization of the field and will be an invaluable resource for teachers, teacher educators and researchers. " Jack C. Richards, University of Sydney and University of Auckland Additional online resources are available at www.oup.com/elt/teacher/esit Donald Freeman is Associate Professor of Education at the University of Michigan. Oxford Applied Linguistics Series Advisers: Anne Burns and Diane Larsen-Freeman

Arabic is one of the world's largest languages, spoken natively by nearly 300 million people. By strength of numbers alone Arabic is one of our most important languages, studied by scholars across many different academic fields and cultural settings. It is, however, a complex language rooted in its own tradition of scholarship, constituted of varieties each imbued with unique cultural values and characteristic linguistic properties. Understanding its linguistics holistically is therefore a challenge. The Oxford Handbook of Arabic Linguistics is a comprehensive, one-volume guide that deals with all major research domains which have been developed within Arabic linguistics. Chapters are written by leading experts in the field, who both present state-of-the-art overviews and develop their own critical perspectives. The Handbook begins with Arabic in its Semitic setting and ends with the modern dialects; it ranges across the traditional - the classical Arabic grammatical and lexicographical traditions--to the contemporary--Arabic sociolinguistics, Creole varieties and codeswitching, psycholinguistics, and Arabic as a second language - while situating Arabic within current phonetic, phonological, morphological, syntactic and lexicological theory. An essential reference work for anyone working within Arabic linguistics, the book brings together different approaches and scholarly traditions, and provides analysis of current trends and directions for future research.

This textbook approaches second language acquisition from the perspective of generative linguistics. Roumyana Stabakova reviews and discusses paradigms and findings from the last thirty years of research in the field, focusing in particular on how the second or additional language is represented in the mind and how it is used in communication. The adoption and analysis of a specific model of acquisition, the Bottleneck Hypothesis, provides a unifying perspective. The book assumes some non-technical knowledge of linguistics, but important concepts are clearly introduced and defined throughout, making it a valuable resource not only for undergraduate and graduate students of linguistics, but also for researchers in cognitive science and language teachers.

This hands-on, practical guide for ESL/EFL teachers and teacher educators outlines, for those who are new to doing action research, what it is and how it works. Straightforward and reader friendly, it introduces the concepts and offers a step-by-step guide to going through an action research process, including illustrations drawn widely from international contexts. Specifically, the text addresses: action research and how it differs from other forms of research the steps involved in developing an action research project ways of developing a research focus methods of data collection approaches to data analysis making sense of action research for further classroom action. Each chapter includes a variety of pedagogical activities: Pre-Reading questions ask readers to consider what they already know about the topic Reflection Points invite readers to think about/discuss what they have read action points ask readers to carry out action-research tasks based on what they have read Classroom Voices illustrate aspects of action research from teachers internationally Summary Points provide a synopsis of the main points in the chapter Bringing the 'how-to' and the 'what' together, Doing Action Research in English Language Teaching is the perfect text for BATESOL and MATESOL courses in which action research is the focus or a required component.

An up to date comprehensive introduction to second language acquisition research. Contains a general framework for the study of second language acquisition, provides a general description of learner language, accounts for the role of the linguistic environment, examines the learner's internal mechanisms, explores individual differences in language learning and reviews the expanding research on classroom second language acquisition.

This edited collection of empirical studies examines the link between interaction and second language learning. The studies provide readers with insights into a wide variety of issues at the centre of current research into the relationship between conversational interaction and second language learning outcomes.
