circuit is bad news; because it can allow the engine to overheat. The engine coolant sensor or a separate engine temperature switch is used to monitor engine temperature.

Engine Cooling Fan - Is Yours Working - How To Test It

The radiator needs a constant flow of air

Read Online Engine Cooling

through its core to cool it adequately. When the car is moving, this happens anyway; but when it is stationary a fan is used to help the airflow. The fan may be driven by the engine, but unless the engine is working hard, it is not always needed while the car is moving, so the energy used in driving it wastes fuel.
