While the civil rights movement has put disability issues centre-stage, there has been minimal discussion of disabled people's sexuality. This book, based on first-hand accounts, takes a close look at questions of identity, relationships, sex, love, parenting and abuse and demolishes the taboo around disability and sex. It shows the barriers to disabled people's sexual rights and sexual expression, and also the ways in which these obstacles are being challenged. Various moving, angry, funny and proud, *The Sexual Politics of Disability* is about disabled people sharing their stories and claiming their place as sexual beings. It is a pioneering work, and essential reading for anyone interested in disability or sexual politics.

Evaluating and treating patients with violent ideations and behaviors can be frustrating, anxiety-provoking, and even dangerous, as errors in judgment can lead to disastrous consequences. Fortunately, there is the *Textbook of Violence Assessment and Management*, the first and only comprehensive textbook on assessing the potentially violent patient for mental health clinicians on the front lines of patient care. Uniquely qualified to produce this comprehensive volume, the editors have assembled a distinguished roster of contributors who, in 28 practical chapters, combine evidence-based medicine with expert opinion to address the topic of patient violence in all its diversity of presentation and expression. Dr. Simon is Director of the Program in Psychiatry and Law at Georgetown University School of Medicine, as well as the author or co-author of more than two dozen books. Dr. Tardiff, Professor of Psychiatry and Public Health at the Payne Whitney Clinic, The New York Hospital -- Cornell Medical Center, is the author of *The Concise Guide to Assessment and Management of Violent Patients*, an introduction to aggression management now in its second edition. Violence is both endemic to our society and epidemic in our age. Skilled assessment and management of violence is therefore critical for mental health professionals involved in patient care. The *Textbook of Violence Assessment and Management* includes many features designed to instruct and support these clinicians. For example: It is the first comprehensive textbook to take the mental health professional from evaluation and assessment to treatment and management of patients who are or may become violent. The 28 chapters address the diversity of clinical settings, patient demographics, psychopathology and treatment modalities, making this work useful as both a textbook and a reference that clinicians can consult as needed for particular cases. End-of-chapter "Key Points" highlight the most important concepts and conclusions, allowing students to review and consolidate their learning and practicing professionals to locate critical information quickly. Clinical case examples abound, providing rich and nuanced perspectives on patient behavior, evaluation and management. The textbook includes a separate chapter on evaluating patients from different cultures, a competency that becomes more crucial as patient populations become more diverse. Increasing numbers of veterans are diagnosed with PTSD and traumatic brain injury. Campus tragedies such as Virginia Tech are fresh in our collective memory. This text is both timely and necessary -- not just for mental health professionals and their patients, but for the families and communities whose safety depends upon competent professional judgment.

*Man the Hunted* argues that primates, including the earliest members of the human family, have evolved as the prey of any number of predators, including wild cats and dogs, hyenas, snakes, crocodiles, and even birds. The authors' studies of predators on monkeys and apes are supplemented here with the observations of naturalists in the field and revealing interpretations of the fossil record. Eyewitness accounts of the 'man the hunted' drama being played out even now give vivid evidence of its prehistoric significance. This provocative view of human evolution suggests that countless adaptations that have allowed our species to survive (from larger brains to speech), stem from a considerably more vulnerable position on the food chain than we might like to imagine. The myth of early humans as fearless hunters dominating the earth obscures our origins as just one of many species that had to be cautious, depend on other group members, communicate

danger, and come to terms with being merely one cog in the complex cycle of life.

Exploring the links between sexuality, society, and state formation, this is the first history of prostitution and its regulation in Peru. Scholars and students interested in Latin American history, the history of gender and sexuality, and the history of medicine and public health will find Drinot's study engaging and thoroughly researched.

A total institution is defined by Goffman as a place of residence and work where a large number of like-situated, individuals, cut off from the wider society for an appreciable period of time, together lead an enclosed, formally administered round of life. Prisons serve as a clear example, providing we appreciate that what is prison-like about prisons is found in institutions whose members have broken no laws. This volume deals with total institutions in general and, mental hospitals, in particular. The main focus is, on the world of the inmate, not the world of the staff. A chief concern is to develop a sociological version of the structure of the self. Each of the essays in this book were intended to focus on the same issue--the inmate's situation in an institutional context. Each chapter approaches the central issue from a different vantage point, each introduction drawing upon a different source in sociology and having little direct relation to the other chapters. This method of presenting material may be irksome, but it allows the reader to pursue the main theme of each paper analytically and comparatively past the point that would be allowable in chapters of an integrated book. If sociological concepts are to be treated with affection, each must be traced back to where it best applies, followed from there wherever it seems to lead, and pressed to disclose the rest of its family.

The volume is the first comprehensive typological study of the conceptualisation of temperature in languages as reflected in their systems of central temperature terms (hot, cold, to freeze, etc.). The key issues addressed here include questions such as how languages categorize the temperature domain and what other uses the temperature expressions may have, e.g., when metaphorically referring to emotions ('warm words'). The volume contains studies of more than 50 genetically, areally and typologically diverse languages and is unique in considering cross-linguistic patterns defined both by lexical and grammatical information. The detailed descriptions of the linguistic and extra-linguistic facts will serve as an important step in teasing apart the role of the different factors in how we speak about temperature - neurophysiology, cognition, environment, social-cultural practices, genetic relations among languages, and linguistic contact. The book is a significant contribution to semantic typology, and will be of interest for linguists, psychologists, anthropologists and philosophers.

This second edition explores the use of play therapy with abused children as a way of helping them heal their distress and make sense of their experiences through expanding their own creativity in play. The book provides practical ways of starting play therapy with abused children and explains how the child can use this process for healing.

The maltreatment of children is an issue that has always been with us and civilized societies provide a range of services both social and medical to care for the children and families afflicted. In recent years, greater attention has been drawn to the medical aspects by competent authorities in the fields of forensic medicine, forensic psychiatry, epidemiological psychiatry, child psychiatry and family psychiatry; as well as the social aspects by those child welfare and child care agencies who have the difficult and distasteful task of removing children, with the help of the courts, from parents who can abuse them and are not able to care for them adequately. A multitude of social agencies, whose range of activities involve both the care and, where possible, the social betterment of afflicted families are now involved. Not least in importance is an increase in our global knowledge to help in the prevention or better treatment of these problems. This means more information on familial and genetic factors in human central nervous system development in its broadest sense. This would include how the central nervous system originates, mediates and controls the build up, speed of development and impulsive release, mastery and direction of aggressive drives and impulses. Very little is so far known about these factors.
