An evacuation slide is an inflatable slide used to evacuate an aircraft quickly. An escape slide is required on all commercial aircraft where the door sill height is such that, in the event of an evacuation, passengers would be unable to step down from the door uninjured. Escape slides are packed and held within the door structure inside the slide bustle, a protruding part of the inside of an aircraft door that varies with aircraft size, door size and door location. In many modern planes, to red

Evacuation slide - Wikipedia

Our systems include inflatable evacuation slides, slide/rafts and life rafts. The systems can be installed on virtually any type of aircraft – civil, commercial and military. Main deck, upper deck or off-wing evacuation systems are available. Our inflatable evacuation systems enhance passenger safety.

Evacuation Systems - Collins Aerospace

The EAM Slide Raft can be used both as a means of escape in a land evacuation and as a life raft in a landing on water. Once the slide is separated, the slide remains attached to the aircraft by a mooring line. When deployed and in water, the raft may be boarded on either side. Accessories are contained in an accessories case tied to the raft.

Evacuation Slide And Slide/Raft Reliability

All commercial aircraft feature multiple evacuation slides; there are 16 on Airbus A380 planes, to enable the evacuation of 550+ passengers in less than 90 seconds. When the door of an aircraft is...

How do plane evacuation slides work?

Under current regulations, each Evacuation Slide & Slide Raft are recommended be removed from the aircraft every 3 years & inspected by an approved FAR Part 145 Repair Station. The OEM recommends a yearly inspection and overhaul after a slide has reached 15 years.

Major Repairs | AVI Aviation | United States

Experimentation has determined that the provision of the evacuation structure with facilities to act as either a slide or raft increases the volume of the device when folded only about 40 percent over the volume of the prior art auxiliary flotation devices.

SLIDE-RAFT FOR EMERGENCY AIRCRAFT EVACUATION - SARGENT IND ...

The A320 has slide rafts on the main doors that are designed to carry passengers in the event of a water landing i.e. they float and detach from the aircraft. In the event of a land evacuation they function as slides. The overwing exit slides are not designed to float or be detached and normally would only be used for land evacuation.

Difference between escape slide and life raft - PPRuNe Forums

This ETSO gives the requirements that new models of emergency evacuation slides, ramps, ramp/slides, and slide/rafts that are manufactured on or after the date of this ETSO must meet in order to be identified with applicable ETSO marking. Type I- Inflatable Slide Type II- Inflatable Slide/Raft Type III- Inflatable Exit Ramp Type IV- Inflatable Exit Ramp/Slide 2 - Procedures 2.1 - General Applicable procedures are detailed in CS-ETSO Subpart A.

European Technical Standard Order - EASA

All escape slides are set within carbon fiber, which is enclosed by a casing of material similar to the interior walls of an aircraft. Once the door of an aircraft is opened by the cabin crew, its evacuation slide is then automatically inflated by high-pressure canisters, which contain either carbon dioxide or nitrogen.

How Do Passenger Plane Emergency Slides Work? - Simple Flying

A slide/raft is an evacuation slide that can be used both as a means of escape in a land evacuation and as a life raft in a landing on water. Slide/rafts usually feature an erectable canopy, outer compartments to hold passengers and survival packs containing items such as leak stoppers, paddles and flares.

Evacuation Slide - Types | Technology Trends

A slide/raft is an evacuation slide that can be used both as a means of escape in a land evacuation and as a life raft in a landing on water. Slide/rafts usually feature an erectable canopy, outer compartments to hold passengers and survival packs containing items such as leak stoppers, paddles and flares.

Evacuation slide – HiSoUR – Hi So You Are

A door slide with an incorrect routing of the electrical harness can impede the evacuation of the passengers (fig.2), or block door opening sequence and prevent the slide deployment. Photo: extract from a slide deployment report sent by an operator (fig.2) Example of a deployed slide with an electrical harness incorrectly routed.
