SCR is an exhaust aftertreatment system that injects small amount of DEF into the exhaust gas between the DPF and the selective reduction catalytic converter. DEF turns to ammonia and carbon dioxide when heated. The exhaust stream then passes over a catalyst, the ammonia reacts with the NOx to form nitrogen and water vapor.

EXHAUST AFTERTREATMENT SYSTEM - QUICK REFERENCE GUIDE

This vehicle has an exhaust Aftertreatment System, to control vehicle exhaust emission. The exhaust Aftertreatment system consist of a Diesel Particulate Filter (DPF), Selective Catalyst Reduction (SCR), Regeneration Switch and warning lights. The DPF will trap soot from the engine exhaust gases. The SCR uses Diesel Exhaust Fluid to reduce the ...

Exhaust gas temperature sensors monitor the system temperatures. NOx sensors measure the NOx conversion. PM (particulate matter) sensors, also known as soot sensors, measure particulates in the exhaust (mainly ash and soot). All of these sensors indicate when the aftertreatment system needs repair or maintenance. Aftertreatment system maintenance

Generally speaking, the heavy duty diesel engine aftertreatment system has two primary components: the exhaust aftertreatment technology — which includes the diesel oxidation catalyst (DOC) and diesel particulate filter (DPF) — to reduce and mitigate PM; and a select catalytic reduction (SCR) system to reduce NOx emissions. "

Aftertreatment Systems 101 - Get educated!

An aftertreatment system is a method or device for reducing harmful exhaust emissions from internal-combustion engines to ensure the engines meet emission regulations. Find out how an aftertreatment system works Core Technologies Cummins ' leading aftertreatment technologies are designed around our proven core technologies.

Aftertreatment Components for Engine and Equipment ...

DEF Aftertreatment When exhaust exits the engine it is made up of carbon monoxide, hydrocarbons, and particulate matter. These are all harmful to the environment and must be captured in the 1-box before exiting through the exhaust outlet. The first defense after the exhaust leaves the engine is the diesel oxidation catalyst.

Aftertreatment Support - Detroit Diesel

The exhaust aftertreatment system also includes two components designed to increase exhaust system temperature for DPF regeneration. The Aftertreatment Fuel Injector (AFI), mounted on the turbocharger diffuser, injects diesel fuel into the exhaust stream during a regeneration cycle.
