Discovering the Universe is the bestselling brief text for descriptive one-term astronomy courses (especially those with no mathematics prerequisites). Carried along by the book's vibrant main theme, "the process of scientific discovery," the Ninth Edition furthers the book ' s legacy for presenting concepts clearly and accurately while providing all the pedagogical tools to make the learning process memorable.

The history of physics and astronomy from the Renaissance to the present day is traced in this collection of more than one hundred and fifty entries about key scientists, concepts, discoveries, technological innovations, and learned institutions.

The New York Times bestselling tour of the cosmos from three of today's leading astrophysicists Welcome to the Universe is a personal guided tour of the cosmos by three of today's leading astrophysicists. Inspired by the enormously popular introductory astronomy course that Neil deGrasse Tyson, Michael A. Strauss, and J. Richard Gott taught together at Princeton, this book covers it all—from planets, stars, and galaxies to black holes, wormholes, and time travel. Describing the latest discoveries in astrophysics, the informative and entertaining narrative propels you from our home solar system to the outermost frontiers of space. How do stars live and die? Why did Pluto lose its planetary status? What are the prospects of intelligent life elsewhere in the universe? How did the universe begin? Why is it expanding and why is its expansion accelerating? Is our universe alone or part of an infinite multiverse? Answering these and many other questions, the authors open your eyes to the wonders of the cosmos, sharing their knowledge of how the universe works. Breathtaking in scope and stunningly illustrated throughout, Welcome to the Universe is for those who hunger for insights into our evolving universe that only world-class astrophysicists can provide.

Examined are recent astronomical findings and developments in theoretical cosmology in order to better understand three broad questions: Was the Universe Created? Is the Cosmos Designed? Are we Alone? The questions are addressed by a broad spectrum of scholars including astronomers cosmologists philosophers and religious scholars who examine the three questions in terms of humanity's place within the universe

“ If you want it done right, do it yourself ” often means “ if you want something done at all.... ” —and that is the story behind A to Misc. Actually, I would have been happy to have someone else collect and publish the short stories and essays I ’ ve written for the past thirty years—and pay me for it, too—even if it wasn ’ t done exactly right. But with the exception of Erlich and the Enemy, which appeared in May 1994 edition of Midstream, nothing in this volume has appeared in print before, or made me any money.

How did the world begin? Is there meaning and purpose in life? Or is existence a matter of chance and chaos? Since human beings first walked the earth, we have been a questioning race, driven by curiosity. For centuries, religion and science have been seen as rival explanations for the way the world is. Both in their different ways pursue questions of life and meaning. But are these two quests totally opposed? Or are they two facets of the human yearning to find out the truth about who we are and what our place in the universe can be? In the search for God--the ultimate source of purpose and meaning--can science help? In this book, adapted from the Oxford Templeton Lectures given in 1992, Sir John Houghton, a leading British scientist with a long involvement in space research, explores the overlap between the concerns of science and religion.

A most interesting collection of detailed but accessible contributions examining cosmology from multiple perspectives. The 31 chapters are organized in nine sections: cosmology and culture, the Greeks' geometrical cosmos, medieval cosmology and literature, the scientific revolution, galaxies--from speculation to science, the expanding universe, particle physics and cosmology, cosmology and philosophy, and cosmology and religion. Each section is individually introduced. Paper edition (unseen), \$18.95. Annotation copyright by Book News, Inc., Portland, OR

Coren's empirically based Evolutionary Trajectory is the result of an innovative application of a cybernetic model of change and growth to the study of evolution.

It embeds distribution functions in a broader astronomical context, including other exciting contemporary topics such as correlation functions, fractals, bound clusters, topology, percolation, and minimal spanning trees."--BOOK JACKET. "This volume is written at a level suitable for graduate students and will be of key interest to astronomers, cosmologists, physicists, and applied statisticians."--BOOK JACKET.

We all have innate talents. We all have tremendous prosperity. And we all have incredible creative power. When we tune in to the power of deliberate conscious creation, there is no end to what we can achieve. That infinite feeling of freedom is the bliss that is our divine birthright. This is the cosmic potential that lives within us all, if we choose to cultivate the prosperity of a rich inner life. Cosmic Wealth is a unique guide that invites us to better understand how to live the law of attraction, harmoniously with other universal concepts, in every day life. Channeled messages are interwoven with practical cosmic truths to create a richly refreshing perspective on the Creator's divine design. This wonderful book will help you remember the magic of belief, your incredible innate talents, many delightful cosmic principles, and the inward process of investing them all - to consciously and prosperously create the life of your dreams.
