Fractional calculus was formulated in 1695, shortly after the development of classical calculus. The earliest systematic studies were attributed to Liouville, Riemann, Leibniz, etc. [1,2].For a long time, fractional calculus has been regarded as a pure mathematical realm without real applications.

Historical notes. In applied mathematics and mathematical analysis, a fractional derivative is a derivative of any arbitrary order, real or complex. Its first appearance is in a letter written to Guillaume de l'Hôpital by Gottfried Wilhelm Leibniz in 1695.. Fractional calculus was introduced in one of Niels Henrik Abel's early papers where all the elements can be found: the idea of ...
