Free-space optical

communication is an

optical communication

technology that uses

light propagating in free

space to wirelessly

transmit data for

telecommunications or

File Type PDF

Free Space

computer networking.

"Free space" means air, outer space, vacuum, or something similar. This contrasts with using solids such as optical fiber cable. The technology is useful where the physical connections are impractical due to high costs or other considerations.

Laser Communi

Wireless

communications have a strong impact on

improving the quality of life in this century.

Smart phones industry is now considered one of the most attractive

fields, so advanced research is conducted in order to improve the quality of service in wireless communication

File Type PDF

Free Space

environments. Many design challenges such as power consumption, quality of service, low cost, high data rate and small size are being treated every day. This book aims to provide highlights of the current research in the field of wireless communications. The subjects discussed are very valuable to

File Type PDF

Free Space

communication

researchers as well as
researchers in the
wireless related areas.

The book chapters cover
a wide range of wireless
communication topics
that are considered key
technologies for future
applications.

This book provides an
in-depth understanding
of free space optical

File Type PDF

Free Space

(FSO) communication with a particular emphasis on optical beam propagation through atmospheric turbulence. The book is structured in such a way that it provides a basic framework for the beginners and also gives a concise description from a designer's perspective. The book provides an exposure to

File Type PDF

Free Space

FSO technology, fundamental limitations, design methodologies, system trade-offs, acquisition, tracking and pointing (ATP) techniques and link-feasibility analysis. The contents of this book will be of interest to professionals and researchers alike. The book may also be used as a textbook for

File Type PDF

Free Space

engineering coursework
and professional
training.

Principles And

Advanced

laser communication
systems has sparked
development of useful

new analytic models.

This book discusses
optical scintillation and
its impact on system
performance in free-
space optical

File Type PDF

Free Space

communication and laser radar applications, with a detailed look at propagation phenomena and the role of scintillation on system behavior. Intended for practicing engineers, scientists, and students.

The first book on optical OFDM by the leading pioneers in the field The only book to cover error

processing for optical

engineers and optical

communication

File Type PDF

Free Space

fundamentals for
wireless engineers This
book gives a coherent
and comprehensive
introduction to the
fundamentals of OFDM
signal processing, with a
distinctive focus on its
broad range of
applications. It evaluates
the architecture, design
and performance of a
number of OFDM
variations, discusses

File Type PDF

Free Space

coded OFDM, and gives a detailed study of error correction codes for access networks, 100 Gb/s Ethernet and future optical networks. The emerging applications of optical OFDM, including single-mode fiber transmission, multimode fiber transmission, free space optical systems, and optical access networks

File Type PDF

Free Space

are examined, with particular attention paid to passive optical networks, radio-over-fiber, WiMAX and UWB communications. Written by two of the leading contributors to the field, this book will be a unique reference for optical communications engineers and scientists. Students, technical

File Type PDF

Free Space

managers and telecom executives seeking to understand this new technology for future-generation optical networks will find the book invaluable.

William Shieh is an associate professor and reader in the electrical and electronic engineering department, The University of Melbourne, Australia.

File Type PDF Free Space

He received his M.S. degree in electrical engineering and Ph.D. degree in physics both from University of Southern California. Ivan Djordjevic is an Assistant Professor of Electrical and Computer Engineering at the University of Arizona, Tucson, where he directs the Optical Communications

File Type PDF

Free Space

Systems Laboratory

(OCSL). His current

research interests

include optical

networks, error control

coding, constrained

coding, coded

modulation, turbo

equalization, OFDM

applications, and

quantum error

correction. "This

wonderful book is the

first one to address the

File Type PDF

Free Space

rapidly emerging optical OFDM field. Written by two leading researchers in the field, the book is structured to comprehensively cover any optical OFDM aspect one could possibly think of, from the most fundamental to the most specialized.

The book adopts a coherent line of presentation, while

File Type PDF

Free Space

striking a thoughtful balance between the various topics, gradually developing the optical-physics and communication-theoretic concepts required for deep comprehension of the topic, eventually treating the multiple optical OFDM methods, variations and applications. In my view

File Type PDF

Free Space

this book will remain relevant for many years to come, and will be increasingly accessed by graduate students, accomplished researchers as well as telecommunication engineers and managers keen to attain a perspective on the emerging role of OFDM in the evolution of photonic networks." --
