Generative geometric design and boundary solid grammars Abstract: "This proposal introduces boundary solid grammars, a formalism for generating complex models of rigid solid objects. Solids are represented by their boundary elements, i.e. vertices, edges and facts, with coordinate geometry associated with the vertices.

Generative geometric design. Abstract: Boundary solid grammars use design rules that express complex geometric conditions and operations using a logical reasoning mechanism, allowing one to construct powerful rules and describe appropriate grammars for the generation of solid models for a variety of design domains. The boundary solid grammar formalism is, however, well suited to extensions for the representation of nonlinear geometry and mixed-dimensional modeling. Design in these domains will require additional representations, such as electrical and hydraulic schematics, structural and aerodynamic meshes, kinematics, and assemblies.
