Grunch of Giants was the second part to Critical Path, which I have not read, after this read, I am in. The book illuminates the scam perpetrated by supracolossal corporations, and the greed and selfishness of the few humans running essentially legal creations, nothing more, are keeping the human race from attaining our place as stewards of the section of the ever regenerating universe we inhabit.

Grunch of Giants by R. Buckminster Fuller - Goodreads

With the appearance of Grunch of Giants, R. Buckminster Fuller consummates his literary canon, his panoramic lifetime survey of all aspects of the responsibility of human beings for their own destiny. This book is a modern allegory - his long-gestated myth-of the villainy of capitalism and the fecklessness of classic economics.

With the appearance of Grunch of Giants, R. Buckminster Fuller consummates his literary canon, his panoramic lifetime survey of all aspects of the responsibility of human beings for their own destiny. This book is a modern allegory - his long-gestated myth-of the villainy of capitalism and the fecklessness of classic economics. For Fuller, the academic discipline of economics is irrelevant since it derives from an invalid assumption of scarcity. In fact, he has long argued that future historians of our era may subsume our business practices as a branch of mythology; thus it is not surprising that the word economic appears nowhere in his text. Fuller ' s myth is no idle fairy tale, since he faces his question - the question of a technological imperative which only he could raise with the deadly seriousness of satire. That question is: Can our system of national political sovereignties and corporate profits survive the inevitable technology revolution require to obviate wars by effecting a worldwide rise in the standard of living. One of the functions of myth is to resolve contradictions in our culture. Grunch of Giants portrays the rising of multinational corporations in the paradoxical role of function both as the epitome of capitalistic selfishness and as the inadvertent vehicle for the dissolution of national political boundaries - the last deterrent to a one-world economy. The result is more subversive of the property and profit values of the capitalist system than anything dreamed of since Karl Marx. —E.J. Applewhite, collaborator with RBF on Synergetics and Synergetics 2, author of Cosmic Fishing: A Memoir of Working With R. Buckminster Fuller

The masterwork of a brilliant career, and an important document of the crisis now facing mankind. Today we find ourselves in the midst of the greatest crisis in the history of the human race. Technology has placed in our hands almost unlimited power at the very moment when we have run up against the limits of our resources aboard Spaceship Earth, as the crises of the late

twentieth century—political, economic, environmental, and ethical—determine whether or not humanity survives. In this masterful summing up of an entire lifetime ' s thought and concern, R. Buckminster Fuller addresses these crucial issues in his most significant, accessible, and urgent work. Critical Path traces the origins and evolution of humanity ' s social, political, and economic systems from the obscure mists of prehistory, through the development of the great political empires, to the vast international corporate and political systems that control our destiny today to show how we got to our present situation and what options are available to man. With his customary brilliance, extraordinary energy, and unlimited devotion, Bucky Fuller shows how mankind can survive, and how each individual can respond to the unprecedented threat we face today. The crowning achievement of an extraordinary career, Critical Path offers the reader the excitement of understanding the essential dilemmas of our time and how responsible citizens can rise to meet this ultimate challenge to our future.

Hailed by Newsweek as "a guide book and a dream book of the future," this volume offers innovative solutions for improving the quality of life through progressive design.

This book collects some of R. Buckminster Fuller ' s most important recent writings on the subject of spaceship Earth: the big, interconnected, total system that is " the only one we ' ve got. " These articles stress the need for considering our planet as a whole, rather than breaking it into its parts—as most of us continue to do. This theme is crucial to the thinking of Bucky Fuller, who, in addition to his many other appellations, has been called the " godfather " of the Whole Earth Catalog. " Humanity is acquiring the right technology for all the wrong reasons—and only as driven by looming wars and the fear of being annihilated by the enemy. Humanity could acquire the technology for the purpose of total success and enduring peace. We say we cannot afford it in peace times, but technology ... not only pays for itself but [leads] inadvertently to the acquisition of greater wealth. " —from " Earthians ' Critical Moment " in Earth, Inc. From backflap Earth, Inc.

One of Fuller ' s most popular works, Operating Manual for Spaceship Earth, is a brilliant synthesis of his world view. In this very accessible volume, Fuller investigates the great challenges facing humanity. How will humanity survive? How does automation influence individualization? How can we utilize our resources more effectively to realize our potential to end poverty in this generation? He questions the concept of specialization, calls for a design revolution of innovation, and offers advice on how to guide " spaceship earth " toward a sustainable future. Description by Lars Muller Publishers, courtesy of The Estate of Buckminster Fuller

In " Ideas and Integrities " Buckminster Fuller describes the revolutionary designs and concepts he has pioneered – among them the geodesic dome, the Dymaxion world map, the Dymaxion 4-D house, the Dymaxion 4-D automobile, and the countless other structures and creations that have changed the face of America and the world. And he sets forth his amazing and challenging ideas for the world of the future – ideas that would revolutionize everything from university education to bathroom design, ideas that, above all, demonstrate how we can and must make far more imaginative and efficient use of the resources now available to us to ensure a better standard of living for all men. Description by Lars Muller Publishers, courtesy of The Estate of Buckminster Fuller

Buckminster Fullers explorations as an architect, engineer, philosopher and futurist are extended into experimental book form through his collaboration with producer Jerome Agel and designer Quentin Fiore. I Seem to Be A Verbs utopian plans, clever insights and light-hearted musings rub elbows with revelatory and often jolting reminders that we are in motion, full of impulsive nerves, flowing blood and constant thought. This fun and challenging book is packed with images, dense layouts and narratives reading both front to back and in reverse. All this to remind us that we are verbs, not nouns! Buckminster Fuller was awarded 25 patents, invented the geodesic dome, the dymaxion car and was expelled from Harvard twice. I Seem to Be a Verb was originally published in 1970. I am convinced that creativity is a priori to the integrity of the universe and that life is regenerative and conformity meaningless. R. Buckminster Fuller.
