It's time for "How to Become a Clinical Psychologist" to catapult your clinical psychology career! About The Expert Deborah Nadolski has been writing from the tender age of four, her first stories centering on WWF star Big John Stud and the NFL. Deborah used to drive her mother crazy by always asking the question "Why," the springboard of her fascination with the inner landscapes of the human mind. With a degree in Mental Health Counseling, Deborah has worked with a variety of populations, including individuals with Traumatic Brain Injury, deaf high schools students, LGBT teenagers, and children exposed to domestic violence. Intuitive about other people's feelings and behavior, Deborah's interest in clinical psychology is a natural fit to her personality. Currently, she works as a General Psychology professor at a community college. Deborah continues to pursue freelance writing, generating articles as a Buffalo Bills writer for HerGameLife.com and a LGBT Parenting Examiner at http://www.examiner.com/lgbt-parenting-in-buffalo/deborah-nadolski. She feels that Socrates' quote "An unexamined life is not worth living" is advice worth taking. Be true to yourself, do what you want to do, and live your passion. A healthy, content mind leads to a rewarding, fulfilling life. HowExpert publishes quick 'how to' guides on all topics from A to Z by everyday experts.

This book walks you through the journey of becoming a clinical psychologist, from the very moment you start your psychology undergraduate degree all the way to completing your clinical doctorate training. No filters, this book covers the highs and lows of this career journey, the reality of the competition you face, and the level of work demanded from you. Personal reflections and recommendations are shared throughout the book with the intention of helping you improve yourself both professionally and personally. Validation and advice is given around how to work effectively and efficiently in clinical, research, and academic settings. Given this is a 'people' industry and we work alongside others, I reflect upon how to manage difficult interpersonal dynamics with colleagues, peers, and supervisors, navigating your way around toxic interactions in order to preserve your sense of self and allow you to work to the best of your abilities. I provide consideration and recommendations for those who are involved in dictating the process of becoming a clinical psychologist in the hope that they would recognise the flaws and gaps within the system, moving them to support those who wish to pursue this career. Furthermore, I speak frankly about your need to prioritise and protect your personal wellbeing as it is constantly at risk of being injured by the process of becoming a clinical psychologist itself. Afterall, if you don't have your personal wellbeing, you will have nothing.

Based on information gathered from assistants, trainee clinical psychologists and clinical psychology course directors across the country, How to Become a Clinical Psychologist includes: information on work experience advice on job applications and interviews details of research projects and training guest chapters dealing with reflections from trainees and professional issues. This guide is the first of its kind and will be an essential companion for anyone interested in pursuing a career in clinical psychology.

Whether you are thinking about starting therapy, going to graduate school, or are yourself a practicing healer of hearts and minds, Becoming a Clinical Psychologist: Personal Stories of Doctoral Training offers a wealth of useful information about today’s training and trainees.. This book is a collection of accounts written by a diverse group of early-career psychologists and doctoral students in their final stages of training. Each of the twelve authors provides a deeply personal, inside perspective on becoming a therapist. Some of the chapters combine qualitative research with the author’s particular experience, while others emphasize the author’s personal journey as s/he moves from novice to clinician. Some of the issues that are covered include the ways in which training affects personal and professional relationships with spouses, friends, peers, faculty and supervisors, and clients; how budding clinicians deal with their own issues and feelings of inadequacy; and how trainees learn to develop the right balance of empathy and detachment in working with clients. Also unique to this collection is the diversity reflected in the contributors, which include an Orthodox Jewish gay man who “came out” during training; a Black woman of African descent who found a home in the psychoanalytic approach; a White man who experienced minority status in his mostly female doctoral program; a bisexual, White woman who had to negotiate misperceptions and judgments as she moved through her clinical training; and a dissident student who came from another profession and found herself at odds with most of her professors and supervisors about the role of trauma in the etiology of mental illness. Becoming a Clinical Psychologist is a compelling read for those both inside and outside the field of psychology.

Becoming an Effective Counselor is a textbook for advanced clinical courses that guides counselors in training through the most challenging phases of their academic preparation. Chapters blend skills-based content, real-world student examples, and opportunities for personal reflection to help students navigate some of the most difficult aspects of clinical counseling. Written by authors with over 50 years of combined counseling experience, this volume prepares aspiring counselors to assess their progress, remediate deficiencies, and deepen their existing skills in a way that is attentive to both core counseling skills and counselors’ internal processes.

The authors demystify the ABPP-CN board certification process and provide specific guidance, tips, recommendations, and direction for neuropsychologists ready to pursue the diplomate status through the ABCN. The book complements existing educational information about board certification, including materials provided through AACN workshops and the AACN Study Guide. All the authors hold ABCN diplomate status, having successfully navigated the process within the last five years, and are accomplished educators who have trained and mentored numerous colleagues, from graduate students and post-doctoral fellows to professional peers. They are also founding members and part of the leadership council for 'Be Ready for ABPP in Neuropsychology' (BRAIN), an organization dedicated solely to facilitating completion of the ABPP-CN certification process by competent clinical neuropsychologists. The authors are thus uniquely qualified to provide essential advice about this potentially intimidating process with empathy, wisdom, and humor.

Considering a career as a Clinical Psychologist? This book is an ideal, jargon-free introduction for those wishing to find out more about working in this demanding but rewarding mental health profession. An accessible text that invites you to think critically about whether becoming a Clinical Psychologist is right for you, questioning and challenging your views and providing an honest perspective of life as a clinical psychologist. Written from personal experience of over 10 years working in applied psychology, with a unique knowledge of the practice, theory, and application of Clinical Psychology, Paul Jenkins provides a first-hand perspective, blending anecdotes with factual advice on the clinical academic culture. It is also packed with case studies which highlight a range of different career pathways (including in other mental health fields) and includes coverage of post-qualification life to gives the reader a sense of the career you can have after training. "If you are considering clinical psychology as a career, this excellent book is essential reading. Paul Jenkins describes the pathway to professional qualification, and all aspect of the job in an exciting and informative style." Alan Carr, PhD Professor of Clinical Psychology, University College Dublin

Discovering what characterizes strong clinical medical librarianship and how those characteristics have been and are supporting clinicians in their delivery of evidence-based medicine can help those in this profession evaluate and strengthen their own programs. Perhaps more importantly, learning about and from leaders in clinical medical librarianship can help not only other librarians but also clinicians and other healthcare professionals strategize to ensure that their programs stay abreast of the rapidly changing healthcare field using methods and approaches that recognize the importance of providing biomedical information and adapting to new technology and research requirements. Beginning with a discussion of the birth of the Clinical Medical Librarian (CML) and continuing with chapters that explore current innovative programs conducted by CMLs, The Clinical Medical Librarians Handbook piques reader’s interest in this exciting professional field through descriptive scenarios. The book moves quickly through the history of librarians accompanying clinicians on medical wards to the realization of librarians partnering with clinicians in the face of a rapidly changing healthcare scene. Success and challenges are discussed by professional CMLs working in urban academic medical centers. The Clinical Medical Librarians Handbook is intended for any library student, practicing librarian or health administrator interested in understanding the variety of roles medical librarians play in the healthcare system of the United States, how medical librarians interact with clinicians and patients, the power of patient-centered care and technology, the importance of information to public health, novel ways to introduce and teach clinical learners to use resources, how clinical medical librarians learn to do the job and tips for managing clinical medical library programs.

"Fostered by massive governmental support, clinical psychology in the United States mushroomed in the years following World War II when social demands for mental health services outdistanced all available resources. In the nearly two decades since, much time and energy have been devoted to spirited discussions of persistent problems in clinical training. It is the purpose of this sourcebook to review past recommendations, consider current programs and issues, and suggest implications for future modifications and innovations. The text is divided into three parts. Part One begins with a distillation of the salient features from the Shakow Report and the Boulder, Stanford, Miami, and Princeton Conferences, focusing on curriculum structure, practicum and field experience, and related issues. This is followed by a review of the growth of training resources from 1945-1902. supported by the United States Public Health Service and the

Veterans Administration. The first part concludes with a survey of the development and impact of professional evaluation and social control, the function of the American Board of Examiners in Professional Psychology, and state certification and licensing. Part Two discusses issues. University clinical psychology programs, ranging from traditional research-oriented training to a practitioner orientation, are noted. In this section, postdoctoral training and specialization in psychotherapy, psychodiagnosis, and research are considered. Part Three presents resources, commentaries, and conclusions. Training in a state system and training abroad are reviewed. Feedback after years of clinical practice is presented by graduates of an accredited program"--Preface.
