Imidacloprid Proposed Interim Registration Review Decision ...

Imidacloprid is a systemic insecticide that acts as an insect neurotoxin and belongs to a class of chemicals called the neonicotinoids which act on the central nervous system of insects. The chemical works by interfering

Download File PDF

with the transmission of stimuli in the insect nervous system.

Specifically, it causes a blockage of the nicotinergetic neuronal pathway. By blocking nicotinic acetylcholine receptors, imidacloprid prevents acetylcholine from transmitting impulses between nerves, resulting in the
