Introduction to Mediation, Moderation, and Conditional... This seminar focuses on two topics in causal analysis that are closely related and often confused. Suppose we have three variables, X, M, and Y. We say that M is a mediator of the effect of X on Y if X carries its influence on Y at least partly by influencing M, which in turn influences Y. This is also known as an indirect effect of X on Y through M.

SPSS, SAS, and R Macros and Code. Andrew F. Hayes, PhD. meaning that "mediation is moderated". When a or b is moderated, it is sensible then to estimate "conditional indirect effects" —values of indirect effect conditioned on values of the moderator variable that moderates a and/or b. Direct effects can also be conditional. For instance, in the above, W moderates X’s direct effect on Y. X
