8528 Part 9

ISO 8528-9:2017 describes a procedure for measuring and evaluating the external mechanical vibration behaviour of generating sets at the measuring points stated in this document. It applies to RIC engine driven a.c. generating sets for fixed and mobile installations with rigid and/or resilient mountings.

Reciprocating internal combustion ...

The provisions of this part of ISO 8528 should be regarded as a basis. For generating sets driven by other reciprocating-type prime movers (e.g. sewage gas engines, steam engines), the provisions of this part of ISO 8528 should be regarded as a basis.

ISO 8528-9 ISO 8528-9
applies to RIC engine driven AC Generating Sets for fixed and mobile installations with rigid and/or resilient mountings. The standard explores the relationship between vibration velocity and vibration frequency. In Figure C1 (next page), example limiting curves for sinusoidal vibrations are published.
