This book discusses three important, hot research issues: social networking-based learning, machine learning-based user modeling and sentiment analysis. Although these three technologies have been widely used by researchers around the globe by academic disciplines and by R&D departments in the IT industry, they have not yet been used extensively for the purposes of education. The authors present a novel approach that uses adaptive hypermedia in e-learning models to personalize educational content and learning resources based on the needs and preferences of individual learners. According to reports, in 2018 the vast majority of internet users worldwide are active on social networks, and the global average social network penetration rate as of 2018 is close to half the population. Employing social networking technologies in the field of education allows the latest technological advances to be used to create interactive educational environments where students can learn, collaborate with peers and communicate with tutors while benefiting from a social and pedagogical structure similar to a real class. The book first discusses in detail the current trend of social networking-based learning. It then provides a novel framework that moves further away from digital learning technologies while incorporating a wide range of recent advances to provide solutions to future challenges. This approach incorporates machine learning to the student-modeling component, which also uses conceptual frameworks and pedagogical theories in order to further promote individualization and adaptivity in e-learning environments. Moreover, it examines error diagnosis, misconceptions, tailored testing and collaboration between students are examined and proposes new approaches for these modules. Sentiment analysis is also incorporated into the general framework, supporting personalized learning by considering the user's emotional state, and creating a user-friendly learning environment tailored to students' needs. Support for students, in the form of motivation, completes the framework. This book helps researchers in the field of knowledge-based software engineering to build more sophisticated personalized educational software, while retaining a high level of adaptivity and user-friendliness within human-computer interactions. Furthermore, it is a valuable resource for educators and software developers designing and implementing intelligent tutoring systems and adaptive educational hypermedia systems.

Looking for a conversational and easy-to-follow book that walks you through the most important nursing concepts and helps you apply them in practice? Then look no further than *Concepts for Nursing Practice, 2nd Edition!* Written by conceptual learning expert Jean Giddens, this innovative interactive text explains 58 of the most common nursing concepts – including six all new concepts – that span the areas of patient physiology, patient behavior, and the professional nursing environment. Featured exemplars for each concept are also discussed to help you more easily understand the concepts and apply them to the clinical setting. In addition to more concepts and featured exemplar sections, this new second edition also boasts a more intuitive organization and review questions for both RN and LPN/LVN programs. In a nutshell, *Concepts for Nursing Practice, 2nd Edition* is not only the key to understanding nursing concepts, it's also the way to hone your clinical reasoning skills and be confidently prepared for almost any workplace situation. Authoritative content written by expert Jean Giddens sets the standard for the rapidly growing concept-based curriculum movement. Exemplar lists for each concept, covering the lifespan and all clinical settings aid readers in assimilating concepts into practice. Case studies in each chapter allow readers to apply knowledge of concepts to real world examples. Logical organization of concepts into units and themes helps readers form immediate connections among related concepts – a key to conceptual learning. Original concept illustrations give readers visual cues to understanding and making

connections across concepts. NEW! Six all-new concepts – spirituality, self-management, sleep, hormonal regulation, fatigue, and health disparities – cover a broader spectrum of nursing practice and provide added flexibility across a variety of nursing programs. NEW! Featured exemplar sections highlight selected exemplars related to each concept and provide a brief synopsis of the exemplar. NEW! Expanded resources for LPN/LVN programs include unique student review questions to offer additional study assistance. NEW! Revised format for Health and Illness concepts includes concise and consistent explanations of conditions across the lifespan along with the rationale for care. NEW! Revised format for Health Care Recipient and Professional Nursing/Health Care concepts provides streamlined explanations of conceptual material in a more logical order. NEW! Renamed theme on Resilience (formerly Coping and Stress Tolerance) emphasizes this increasingly important aspect of personal responsibility in health and illness.

This survey aims to help countries review and develop policies to make the teaching profession more attractive and more effective.

This book addresses the importance of human factors in optimizing the learning and training process. It reports on the latest research and best practices, and discusses key principles of behavioral and cognitive science, which are extremely relevant to the design of instructional content and new technologies to support mobile and multimedia learning, virtual training and web-based learning, among others, as well as performance measurements, social and adaptive learning and many other types of educational technology, with a special emphasis on those important in the corporate, higher education, healthcare and military training contexts. Gathering contributions to the AHFE 2020 Virtual Conference on Human Factors in Training, Education, and Learning Sciences, held on July 16–20, 2020, the book offers a timely perspective on the role of human factors in education. It highlights important new approaches and ideas, and fosters new discussions on how to optimally design learning experiences.
