Mathematical Methods for Economics | Michael Klein | download
Let c be the number of internal end points labeled A. If we count A end points segment by segment we get $2c+1$. Therefore $2a+b=2c+1$, which implies that $b=2(c-a)+1$ so b , the number of segments labeled AB, is an odd number. Since zero is not an odd number there has to be at least one segment labeled AB.
