now a commonly available means of connecting industrial electronic devices. Modbus is popular in industrial environments because it is openly published and royalty-free. It was developed for industrial applications, is relatively easy to deploy and maintain compared to other standards, and places few

Modbus - Wikipedia

In Modbus you need a data sheet to know what data is inside a field device. In BACnet you don't. You can go-online and discover the devices on a network and then interrogate the devices so they report what data objects they contain and what properties each object supports and what the current state of each property

A Modbus query is made up of the device (or broadcast) address, a function code that defines any requested action, data returned with the request, and an error-checking field. A Modbus response is comprised of fields that verify the requested action has been taken, data sent with the response, and an error-checking field. The slave device will create an error message as its response if it is unable to fulfill the request or if errors impacted the receipt of the message.
