the Volts/Hertz ratio. Therefore, $460/60$ is full speed and $230/30$ equals half speed, etc. This method of control, however, causes different electrical stresses on a motor, which necessitated further motor innovation and led to the inverter duty rated motor.

Technology | Turntide Technologies
An electrical control system is a physical
interconnection of devices that influences
the behaviour of other devices or systems.

A simple electronic system is made up of an input, a process, and an output. Both input and output variables to the system are signals. Examples of such systems include circulation pumps, compressors, manufacturing systems, refrigeration plant and motor control panels.

Most electric motors operate through the interaction between the motor's magnetic field and electric current in a wire winding to generate force in the form of torque applied on the motor's shaft. Electric motors can be powered by direct current
