In this long-awaited memoir, illustrated with over 100 never-before-seen photos from his personal collection, the groundbreaking record producer chronicles his struggles, his success, and the celebrated artists that made him a legend. Over the last twenty-five years, legendary music producer and record man LA Reid—the man behind artists such as Toni Braxton, Kanye West, Rihanna, TLC, Outkast, Mariah Carey, Pink, Justin Bieber, and Usher—has changed the music business forever. In addition to discovering some of the biggest pop stars on the planet, he has shaped some of the most memorable and unforgettable hits of the last two generations, creating an impressive legacy of talent discovery and hit records. Now, for the first time, he tells his story, taking fans on an intimate tour of his life, as he chronicles

the fascinating journey from his small-town R&B roots in Cincinnati, Ohio, and his work as a drummer to his fame as a Grammy Award-winning music producer and his gig as a judge on the hit reality show, The X Factor. In Sing to Me, Reid goes behind the scenes of the music industry, charting his rise to fame and sharing stories of the countless artists he ' s met, nurtured, and molded into stars. With fascinating insight into the early days of artists as diverse as TLC, Usher, Pink, Kanye West, and Justin Bieber, his story offers a detailed look at what life was like for stars at the start of their meteoric rise and how he always seemed to know who would be the next big thing. What emerges is a captivating portrait from the inside of popular music evolution over the last three decades. Part music memoir, part business story of climbing to the top, this beautifully designed book, jam packed with photos, showcases Reid's trademark passion and ingenuity and

yet contemporary; theoretical, yet applied – McClave & Sincich ' s Statistics gives you the best of both worlds. This text offers a trusted, comprehensive introduction to statistics that emphasizes inference and integrates real data throughout. The authors stress the development of statistical thinking, the assessment of credibility, and value of the inferences made from data. This new edition is extensively revised with an eye on clearer, more concise language throughout the text and in the exercises. Ideal for one- or two-semester courses in introductory statistics, this text assumes a mathematical background of basic algebra. Flexibility is built in for instructors who teach a more advanced course, with optional footnotes about calculus and the underlying theory. Also available with MyStatLab MyStatLab™ is an online homework, tutorial, and assessment program designed to work with this text to engage students and improve results. Within its structured

The Power of Customer Misbehavior explores the importance of customer driven innovation for top line and bottom line growth. It shows how companies should not only learn to identify how their products are being misused, but also how to use this knowledge to innovate new products and services that better meet customer needs and promote viral growth. These techniques also promote long-term customer loyalty and growth even in hypercompetitive environments. This unique new book is the first to explore the idea of 'customer misuse': when customers modify features or expand the usage of products and services in ways that were never intended. Reacting appropriately to customer misuse will allow companies to enter new markets, create more loyal customers, and encourage customers to tell

others about the company's products, all of which foster faster growth. These compelling concepts are presented in the form of simple actionable principles and illustrated with rich case studies from successful companies such as Twitter, Intuit, eBay and Coca-Cola, to offer the first practical guide to harnessing this new source of strategic innovation.

This book is dedicated to Aristid Lindenmayer on the occasion of his 60th birthday on November 17, 1985. Contributions range from mathematics and theoretical computer science to biology. Aristid Lindenmayer introduced language-theoretic models for developmental biology in 1968. Since then the models have been customarily referred to as L systems. Lindenmayer's invention turned out to be one of the most beautiful examples of interdisciplinary science: work in one area (developmental biology) induces most fruitful ideas in other areas (theory of formal languages and automata, and formal power series). As evident from the articles and references in this book, the interest in L systems is continuously growing. For newcomers the first contact with L systems usually happens via the most basic class of L

systems, namely, DOL systems. Here "0" stands for zero context between developing cells. It has been a major typographical problem that printers are unable to distinguish between 0 (zero) and 0 (oh). Thus, DOL was almost always printed with "oh" rather than "zero", and also pronounced that way. However, this misunderstanding turned out to be very fortunate. The wrong spelling "DOL" of "DOL" could be read in the suggestive way: DO L Indeed, hundreds of researchers have followed this suggestion. Some of them appear as contributors to this book. Of the many who could not contribute, we in particular regret the absence of A. Ehrenfeucht, G. Herman and H.A. Maurer whose influence in the theory of L systems has been most significant.

Micro-Hydro Design Manual has grown from Intermediate Technology's field experiences with micro-hydro installations and covers operation and maintenance, commissioning, electrical power, induction generators, electronic controllers, management, and energy surveys. There is an increasing need in many countries for power supplies to rural areas, partly to support industries, and partly to provide illumination at night. Government authorities are faced with the very high costs of extending electricity grids. Often micro-hydro provides an economic alternative to the grid. This is because independent micro-hydro schemes save on the cost of grid transmission lines, and because grid extension schemes often have very

expensive equipment and staff costs. In contrast, micro-hydro schemes can be designed and built by local staff and smaller organizations following less strict regulations and using 'off-the-shelf' components or locally made machinery.
