Ward Cheney is Professor of Mathematics at the University of Texas at Austin. His research interests include approximation theory, numerical analysis, and extremum problems. David Kincaid is Senior Lecturer in the Department of Computer Sciences at the University of Texas at Austin. Also, he is the Interim Director of the Center for Numerical Analysis (CNA) within the Institute for Computational Engineering and Sciences (ICES).

Cengage Learning, Aug 3, 2007 - Mathematics - 784 pages. 1 Review. Authors Ward Cheney and David Kincaid show students of science and engineering the potential computers have for solving numerical problems and give them ample opportunities to hone their skills in programming and problem solving. The text also helps students learn about errors that inevitably accompany scientific computations and arms them with methods for detecting, predicting, and controlling these errors.

Thus, to compute the diagonal, we write $22 + 32 = d^2$, where d is the diagonal. It follows that $d = \sqrt{4 + 9} = \sqrt{13} = 3.605551275$. This last number is obtained by using a hand-held calculator. The accuracy of d as given can be verified by computing $(3.605551275)^2 - 13 = 0$.
