 Poppers is a street term, or a slang, for any liquid that belongs to the alkyl nitrite family and is used recreationally to intensify sexual pleasure, or—in club culture—to enhance the perception of sound and light. Poppers are administered by inhaling the content from a small bottle (10-30ml) that contains the liquid, which is typically yellowish in color and has a distinctive, fruity, sweetish aroma (although this varies depending on the particular nitrite used.)

Poppers Guide
 Poppers are designed to be room aromas that freshen up a room. However, they also contain Alkyl Nitrites (or amyl nitrates) and these can have a variety of effects on the human body. If you use poppers properly, as we have described in this guide, then you should not need to worry about these effects.

How to use poppers — 2020 poppers guide
 Poppers are liquid substances in the group of chemicals called alkyl nitrates. In the past, poppers were amyl nitrates, but now isopropyl nitrate and butyl nitrate are more common. Poppers were first available in the 1800s as amyl nitrates and were for treating angina (chest pains).

 Most poppers sold in the United States today are actually solvent cleaners from a class of chemicals known as alkyl nitrites. The original poppers was a prescription medication, first discovered and used to treat the heart condition angina, called amyl nitrate. Amyl nitrates were removed from the market when better medications were found.
