Enfrentando uma competi ç ã o severa, as empresas em todo o mundo investem cada vez mais no design como poderoso meio de aumentar a qualidade dos produtos e se diferenciar dos seus concorrentes. Este livro apresenta uma metodologia de projeto de produto orientado para as necessidades do consumidor e do mercado. A sua abordagem é bastante pr á tica, com os principais conceitos organizados em forma de 'ferramentas' para serem utilizados como produtos simples, encomendados por instrumentos durante a atividade de projeto. A teoria é ilustrada com diversos casos de aplica ç ã o pr á tica. Todos eles foram baseados em projetos desenvolvidos pelo pr ó prio autor e sua equipe do Design Research Centre, ligado à Universidade de Brunel, Inglaterra. Referem-se a pequenas e m é dias empresas da regi ã o.

This volume features the proceedings of the 14th ISPE Conference on Concurrent Engineering, held in S ã o Jos é dos Campos, S ã o Paulo, Brazil, on the 16th – 20th of July 2007. It highlights the application of concurrent engineering to the development of complex systems.

Successful interaction with products, tools and technologies depends on usable designs and accommodating the needs of potential users without requiring costly training. In this context, this book is concerned with emerging ergonomics in design concepts, theories and applications of human factors knowledge focusing on the discovery, design and understanding of human interaction and usability issues with products and systems for their improvement. This book will be of special value to a large variety of professionals, researchers and students in the broad field of human modeling and performance who are interested in feedback of devices' interfaces (visual and haptic), user-centered design, and design for special populations, particularly the elderly. We hope this book is informative, but even more - that it is thought provoking. We hope it inspires, leading the reader to contemplate other questions, applications, and potential solutions in creating good designs for all.

As a concept, Concurrent Engineering (CE) initiates processes with the goal of improving product quality, production efficiency and overall customer satisfaction. Services are becoming increasingly important to the economy, with more than 60% of the GDP in Japan, the USA, Germany and Russia deriving from service-based activities. The definition of a product has evolved from the manufacturing and supplying of goods only, to providing goods with added value, to eventually promoting a complete service business solution, with support from introduction into service and from operations to decommissioning. This book presents the proceedings of the 20th ISPE International Conference on Concurrent Engineering, held in Melbourne, Australia, in September 2013. The conference had as its theme Product and Service Engineering in a Dynamic World, and the papers explore research results, new concepts and insights covering a number of topics, including service engineering, cloud computing and digital manufacturing, knowledge-based engineering and sustainability in concurrent engineering.

The aim of the first two German editions of our book Konstruktionslehre (Engineering Design) was to present a comprehensive, consistent and clear approach to systematic engineering design. The book has been translated into five languages, making it a standard international reference of equal importance for improving the design methods of practising designers in industry and for educating students of mechanical engineering design. Although the third German edition conveys essentially the same message, it contains additional knowledge based on further findings from design research and from the application of systematic design methods in practice. The latest references have also been included. With these additions the book achieves all our aims and represents the state of the art. Substantial sections remain identical to the previous editions. The main extensions include: - a discussion of cognitive psychology, which enhances the creativity of design work; - enhanced methods for product planning; - principles of design for recycling; - examples of well-known machine elements*; - special methods for quality assurance; and - an up-to-date treatment of CAD*.

The discovery of market needs and the manufacture of a product to meet those needs are integral parts of the same process. Since most textbooks on new product development are written from either a marketing or an engineering perspective, it is important for students to encounter these two aspects of product development together in a single text. Product Design: Practical Methods for the Systematic Development of New Products covers the entire new product development process, from market research through concept design, embodiment design, design for manufacture, and product launch. Systematic and practical in its approach, the text offers both a structured management framework for product development and an extensive range of specific design methods. Chapters feature "Design Toolkits" that provide detailed guidance on systematic design methods, present examples with familiar products, and conclude with reviews of key concepts. This major text aims to turn the often haphazard and unstructured product design process into a quality-controlled, streamlined, and manageable procedure. It is ideal for students of engineering, design, and technology on their path to designing new products.

O livro fornece base prática para os primeiros traços em Técnicas de Apresentação de Projetos, Esboço de Projetos, Desenho Artístico, Croqui, Estrutura e Organização da Forma, Criatividade, Geometria Bidimensional e disciplinas similares. O conteúdo é objetivo e conciso.

For students of design, professional product designers, and anyone interested in design equally indispensable: the fully revised and updated edition of the reference work on product design. The book traces the history of product design and its current developments, and presents the most important principles of design theory and methodology, looking in particular at the communicative function of products and highlighting aspects such as corporate and service design, design management, strategic design, interface/interaction design and human design..
