In 1978, as the protests against the Shah of Iran reached their zenith, philosopher Michel Foucault was working as a special correspondent for Corriere della Sera and le Nouvel Observateur. During his little-known stint as a journalist, Foucault traveled to Iran, met with leaders like Ayatollah Khomeini, and wrote a series of articles on the revolution. Foucault and the Iranian Revolution is the first book-length analysis of these essays on Iran, the majority of which have never before appeared in English. Accompanying the analysis are annotated translations of the Iran writings in their entirety and the at times blistering responses from such contemporaneous critics as Middle East scholar Maxime Rodinson as well as comments on the revolution by feminist philosopher Simone de Beauvoir. In this important and controversial account, Janet Afary and Kevin B. Anderson illuminate Foucault's support of the Islamist movement. They also show how Foucault's experiences in Iran contributed to a turning point in his thought, influencing his ideas on the Enlightenment, homosexuality, and his search for political spirituality. Foucault and the Iranian Revolution informs current discussion on the divisions that have reemerged among Western intellectuals over the response to radical Islamism after September 11. Foucault's provocative writings are thus essential for understanding the history and the future of the West's relationship with Iran and, more generally, to political Islam. In their examination of these journalistic pieces, Afary and Anderson offer a surprising glimpse into the mind of a celebrated thinker.

As a young British officer in the Gurkha regiment, John Mackinlay served in the rainforests of North Borneo and experienced firsthand the Maoist-style insurgencies of the 1960s. Years later, as a United Nations researcher, he witnessed the chaotic deployment of international forces to Africa, the Balkans, and South Asia, and the transformation of territorial, labor-intensive uprisings into the international insurgent networks we know today. After 9/11, Mackinlay turned his eye toward the Muslim communities of Europe and institutional efforts to prevent terrorism. In particular, he investigates military expeditions to Iraq and Afghanistan and their effect on the social cohesion of European

populations that include Muslims from these regions. In a world divided between rich and poor, the surest way for the "bottom billion" to gain recognition, express outrage, or improve their circumstances is through insurgency. In this book, Mackinlay explains why leaders from the wealthiest and most powerful nations have failed to understand this phenomenon. Our current bin Laden era, Mckinlay argues, must be viewed as one stage in a series of developments swept up in the momentum of a global insurgency. The campaigns of the 1960s are directly linked to the global movements of tomorrow, yet in the past two decades, insurgent activity has given rise to a new practice that incorporates and exploits the "propaganda of the deed." This shift challenges our vertically-structured response to terror and places a greater emphasis on mastering the virtual, cyber-based dimensions of these campaigns. Mckinlay revisits the roots of global insurgencies, describes their nature and character, reveals the power of mass communications and grievance, and recommends how individual nations can counter these threats by focusing on domestic terrorism.

This book differs from other thermodynamics texts in its objective which is to provide engineers with the concepts, tools, and experience needed to solve practical real-world energy problems. The presentation integrates computer tools (e.g., EES) with thermodynamic concepts to allow engineering students and practising engineers to solve problems they would otherwise not be able to solve. The use of examples, solved and explained in detail, and supported with property diagrams that are drawn to scale, is ubiquitous in this textbook. The examples are not trivial, drill problems, but rather complex and timely real world problems that are of interest by themselves. As with the presentation, the solutions to these examples are complete and do not skip steps. Similarly the book includes numerous end of chapter problems, both typeset and online. Most of these problems are more detailed than those found in other thermodynamics textbooks. The supplements include complete solutions to all exercises, software downloads, and additional content on selected topics. These are available at the book web site www.cambridge.org/KleinandNellis.

This invaluable guide provides short scenarios of typical international involvement in peace missions, natural disasters, and stability operations, as well as an introduction to the organizations that will be present when the international community responds to a crisis.

Established in 1911, The Rotarian is the official magazine of Rotary International and is circulated worldwide. Each issue contains feature articles, columns, and departments about, or of interest to, Rotarians. Seventeen Nobel Prize winners and 19 Pulitzer Prize winners — from Mahatma Gandhi to Kurt Vonnegut Jr. — have written for the magazine.

The advent of cyberspace has led to a dramatic increase in state-sponsored political and economic espionage. This monograph argues that these practices represent a threat to the maintenance of international peace and security and assesses the extent to which international law regulates this conduct. The traditional view among international legal scholars is that, in the absence of direct and specific international law on the topic of espionage, cyber espionage constitutes an extra-legal activity that is unconstrained by international law. This monograph challenges that assumption and reveals that there are general principles of international law as well as specialised international legal regimes

that indirectly regulate cyber espionage. In terms of general principles of international law, this monograph explores how the rules of territorial sovereignty, non-intervention and the non-use of force apply to cyber espionage. In relation to specialised regimes, this monograph investigates the role of diplomatic and consular law, international human rights law and the law of the World Trade Organization in addressing cyber espionage. This monograph also examines whether developments in customary international law have carved out espionage exceptions to those international legal rules that otherwise prohibit cyber espionage as well as considering whether the doctrines of self-defence and necessity can be invoked to justify cyber espionage. Notwithstanding the applicability of international law, this monograph concludes that policymakers should nevertheless devise an international law of espionage which, as *lex specialis*, contains rules that are specifically designed to confront the growing threat posed by cyber espionage.

This new edition of the popular and market-leading *Diabetes in Old Age* features up-to-date and comprehensive information about the key aspects of managing older people with diabetes, predominantly type 2 diabetes. With a strong evidence-based focus throughout, the entire range of issues surrounding diabetes and its many complications are covered, each with a clear focus on how they relate directly to the older patient. Varying approaches to optimizing diabetes care in the community, primary care and secondary care health care arenas are presented, and the importance of comprehensive functional assessment is emphasized. Coverage of areas unique to an ageing population of older people with diabetes such as falls management, frailty and sarcopenia, and cognitive dysfunction form a key cornerstone of the book. In every chapter, best practice points and key learning outcomes are provided, as well as published evidence bases for each major conclusion. *Diabetes in Old Age*, 4th edition is essential reading for diabetologists and endocrinologists, diabetes specialist nurses, primary care physicians, general physicians and geriatricians, podiatrists and dieticians with an interest in diabetes, as well as all health professionals engaged in the delivery of diabetes care to older people.
