Henry Hobhouse was the first to recognise plants as a causal factor in history in his *Seeds of Wealth*. In this new book, he examines four plants: rubber, timber, tobacco and the wine grape, each of which enormously increased the wealth of those who dealt in them, created great new industries and changed the course of history. Ancient Rome's monopoly on wine production had huge economic and hygienic importance. Without rubber, there

would have been no development of cars, buses and trucks, bicycles, waterproof clothing or even tennis balls and condoms. Tobacco has largely been condemned for its effects on health and its true role in history ignored. Tobacco has often been used in place of currency and its growth in Virginia supported a colony that produced much of the talent that made Independence possible. Timber shortages led the British Royal Navy to become dependent on American timber. The dearth of timber drove English coal mines deep, which led to the steam pumps, steam engines, and ultimately the Industrial Revolution. These are fascinating stories the effect of minutiae on the great waves of

Seeds are nature's consummate survivors. The next time you admire a field of waving green grassland or a stunning grove of acacia, stop to consider how it got that way—often against incredible odds. Seeds can survive freezing temperatures and drought. They can pass through our digestive systems without damage and weather a trip across the ocean, hitching a ride on marine debris. They can even endure complete desiccation, a feat taken to extraordinary lengths by the date palm, a seed from which was

recovered from the palace of Herod the Great was germinated after some two thousand years. The Book of Seeds takes readers through six hundred of the world's seed species, revealing their extraordinary beauty and rich diversity. Each page pairs a beautifully composed photo of a seed—life-size, and, in some cases, enlarged to display fine detail—with a short description, a map showing distribution, and information on conservation status. The whole spectrum of seeds is covered here. There are prolific species like corn and less widely distributed species, like the brilliant blue seeds of the traveler's palm or the bird of paradise flower, aptly named for its distinctive orange coiffure.

There are tiny seeds and seeds weighing up to forty pounds. And while seeds in all their shapes, sizes, and colors grant us sustenance, there are even some we would be wise to treat with caution, such as the rosary pea, whose seeds are considered more toxic than ricin. The essential guide to these complex plant creations, *The Book of Seeds* offers readers a rare, up-close look that will inspire scientists and nature lovers alike.

In *Forces of Change*, Henry Hobhouse argues provocatively, and most convincingly, that modern history has been shaped less by the actions of human beings than by three natural forces: population growth, food supply, and disease. Examining 500 years of history, Hobhouse observes the relative roles of these forces from the time of the Black Plague to the present day. Invigorating and immediate, his unconventional approach sheds a whole new light on history as we have presumed to know it.

Using personal examples, Willem explains that your outlook and actions are the result of seeds that have been planted and nurtured in your mind from an early age—they may be seeds of love, knowledge, and happiness or they may be weeds of fear, anger, and self-loathing. Positive seeds will grow into trees that will support you throughout the ups and downs of life. Negative seeds will turn into weeds that will bring obstacles to you and others. With unfaltering enthusiasm, Willem gives the reassurance that you are in control of the seeds that take root within. You can yank out harmful weeds and plant the seeds of happiness, love, success, health, and knowledge in their

"The genius of Hanson's fascinating, inspiring, and entertaining book stems from the fact that it is not about how all kinds of things grow from seeds; it is about the seeds themselves."
--Mark Kurlansky, New York Times Book Review We live in a world of seeds. From our morning toast to the cotton in our clothes, they are quite literally the stuff and staff of life: supporting diets, economies, and civilizations around the globe. Just as the search for nutmeg and pepper drove the Age of Discovery, coffee beans fueled the Enlightenment and cottonseed sparked the Industrial Revolution. Seeds are

Fundamental objects of beauty, evolutionary wonders, and simple fascinations. Yet, despite their importance, seeds are often seen as commonplace, their extraordinary natural and human histories overlooked. Thanks to this stunning new book, they can be overlooked no more. This is a book of knowledge, adventure, and wonder, spun by an award-winning writer with both the charm of a fireside story-teller and the hard-won expertise of a field biologist. A fascinating scientific adventure, it is essential reading for anyone who loves to see a plant grow.
