“This book contains some of the most up-to-date information available anywhere on a wide variety of topics related to Techno Security. As you read the book, you will notice that the authors took the approach of identifying some of the risks, threats, and vulnerabilities and then discussing the countermeasures to address them. Some of the topics and thoughts discussed here are as new as tomorrow’s headlines, whereas others have been around for decades without being properly addressed. I hope you enjoy this book as much as we have enjoyed working with the various authors and friends during its development. —Donald Withers, CEO and Cofounder of TheTrainingCo. □ Jack Wiles, on Social Engineering offers up a potpourri of tips, tricks, vulnerabilities, and lessons learned from 30-plus years of experience in the worlds of both physical and technical security. □ Russ Rogers on the Basics of Penetration Testing illustrates the standard methodology for penetration testing: information gathering, network enumeration, vulnerability identification, vulnerability exploitation, privilege escalation, expansion of reach, future access, and information compromise. □ Johnny Long on No Tech Hacking shows how to hack without touching a computer using tailgating, lock bumping, shoulder surfing, and dumpster diving. □ Phil Drake on Personal, Workforce, and Family Preparedness covers the basics of creating a plan for you and your family, identifying and obtaining the supplies you will need in an emergency. □ Kevin O’Shea on Seizure of Digital Information discusses collecting hardware and information from the scene. □ Amber Schroader on Cell Phone Forensics writes on new methods and guidelines for digital forensics. □ Dennis O’Brien on RFID: An Introduction, Security Issues, and Concerns discusses how this well-intended technology has been eroded and used for fringe implementations. □ Ron Green on Open Source Intelligence details how a good Open Source Intelligence program can help you create leverage in negotiations, enable smart decisions regarding the selection of goods and services, and help avoid pitfalls and hazards. □ Raymond Blackwood on Wireless Awareness: Increasing the Sophistication of Wireless Users maintains it is the technologist’s responsibility to educate, communicate, and support users despite their lack of interest in understanding how it works. □ Greg Kipper on What is Steganography? provides a solid understanding of the basics of steganography, what it can and can’t do, and arms you with the information you need to set your career path. □ Eric Cole on Insider Threat discusses why the insider threat is worse than the external threat and the effects of insider threats on a company. Internationally known

experts in information security share their wisdom Free pass to Techno Security Conference for everyone who purchases a book—\$1,200 value

Emerging technologies in education are dramatically reshaping the way we teach, learn, and create meaning—both formally and informally. The use of emerging technologies within educational contexts requires new methodological approaches to teaching, learning, and educational research. This leads educational technology developers, researchers, and practitioners to engage in the creation of diverse digital learning tools that can be used in a wide range of learning situations and scenarios. Ultimately, the goal of today's digital learning experiences includes situational experiences wherein learners and teachers symbiotically enroll in meaning-making processes. Discussion, critical reflection, and critique of these emerging technologies, tools, environments, processes, and practices require scholars to involve themselves in critical conversation about the challenges and promises afforded by emerging technologies and to engage in deliberate thinking about the critical aspects of these emerging technologies that are drastically reshaping education. The Handbook of Research on Global Education and the Impact of Institutional Policies on Educational Technologies deepens this discussion of emerging technologies in educational contexts and is centered at the intersection of educational technology, learning sciences, and socio-cultural theories. This book engages a critical conversation that will further the discussion about the pedagogical potential of emerging technologies in contemporary classrooms. Covering topics such as communication networks, online learning environments, and preservice teacher education, this text is an essential resource for educational professionals, preservice teachers, professors, teachers, students, and academicians.

Techno-Anthropology is an emerging interdisciplinary research field focusing on human/technology interactions and relations, and how these can be understood and facilitated in context. Techno-Anthropology also considers how technological innovation, development and implementation can be made in an appropriate and pragmatic way in relation to understanding work practices. Techno-Anthropology has much to offer the health informatics and eHealth fields, and this book presents the work of experienced international researchers who share here how they have applied Techno-Anthropology methodologies to their research. The book is divided into three sections: ethnographic and anthropological perspectives on methodology; ethical and sociotechnical approaches; and users, participation and human factors. Topics covered include: learning the craft of Techno-Anthropology; anthropological approaches in studying technology induced errors; technology and the ecology of chronic illness in everyday life; Techno-Anthropologists as agents of change; and using rapid ethnography to support the design and implementation of health information technologies, as well as many more. Of interest to researchers and practitioners within the health informatics field as well as students and scholars, the book will inspire researchers and practitioners to examine health informatics from a new perspective.

This book includes a selection of articles from the 2018 International Conference on Information Technology & Systems (ICITS 18), held on January 10 - 12, 2018, at the Universidad Estatal Península de Santa Elena, Libertad City, Ecuador. ICIST

is a global forum for researchers and practitioners to present and discuss recent findings and innovations, current trends, lessons learned and the challenges of modern information technology and systems research, together with their technological development and applications. The main topics covered include information and knowledge management; organizational models and information systems; software and systems modeling; software systems, architectures, applications and tools; multimedia systems and applications; computer networks, mobility and pervasive systems; intelligent and decision support systems; big data analytics and applications; human-computer interaction; ethics, computers & security; health informatics; and information technologies in education.

This is a state-of-the-art survey of an emerging area of study in media, communication and cultural studies, mobility studies and mobile communications. 'Mobile socialities' demarcates a new area of research that captures people's various and contrary experiences of media in relation to their mobilities and socialities. The chapters in this volume are written by a range of international scholars offering a comprehensive overview and source of inspiration for a diverse range of topics on the contingent practices and finite resources of people and media on the move. The book demonstrates through empirical and theoretical research how mobile socialities is a generative concept for thinking through power, identity and the contexts of media in public and mediated spaces, work and everyday life, addressing a spectrum of mobile socialities and lived politics. The research and various cases make visible previously hidden, or obscured, social practices and allow us to rethink the meanings of mobility, digital media or the home in these examples of people living within the centre and peripheries of society. The Handbook establishes mobile socialities as a new area of academic enquiry, ideal for advanced undergraduate students and scholars across the disciplines of media, communication and cultural studies, anthropology, cultural geography and sociology.

Around the world, SCADA (supervisory control and data acquisition) systems and other real-time process control networks run mission-critical infrastructure--everything from the power grid to water treatment, chemical manufacturing to transportation. These networks are at increasing risk due to the move from proprietary systems to more standard platforms and protocols and the interconnection to other networks. Because there has been limited attention paid to security, these systems are seen as largely unsecured and very vulnerable to attack. This book addresses currently undocumented security issues affecting SCADA systems and overall critical infrastructure protection. The respective co-authors are among the leading experts in the world capable of addressing these related-but-independent concerns of SCADA security. Headline-making threats and countermeasures like malware, sidejacking, biometric applications, emergency communications, security awareness planning, personnel & workplace preparedness and bomb threat planning will be addressed in detail in this one of a kind book-of-books dealing with the threats to critical infrastructure protection. They collectively have over a century of expertise in their respective fields of infrastructure protection. Included among the contributing authors are Paul Henry, VP of Technology Evangelism, Secure Computing, Chet Hosmer, CEO and Chief Scientist at Wetstone Technologies, Phil Drake, Telecommunications Director, The Charlotte Observer, Patrice Bourgeois, Tenable Network Security, Sean

Lowther, President, Stealth Awareness and Jim Windle, Bomb Squad Commander, CMPD. * Internationally known experts provide a detailed discussion of the complexities of SCADA security and its impact on critical infrastructure * Highly technical chapters on the latest vulnerabilities to SCADA and critical infrastructure and countermeasures * Bonus chapters on security awareness training, bomb threat planning, emergency communications, employee safety and much more * Companion Website featuring video interviews with subject matter experts offer a "sit-down" with the leaders in the field

MOJO: The Mobile Journalism Handbook is the first book devoted specifically to training citizens, journalism students and media professionals to produce professional-quality videos with only a mobile device. As journalism becomes increasingly competitive, students and emerging professionals need a broader skillset to make themselves more employable, whether as mainstream or entrepreneurial journalists. This book by Dr. Ivo Burum and Dr. Stephen Quinn, world experts in mobile journalism, provides comprehensive coverage of all the skills and practices needed to be a mobile journalist. Key features: Burum and Quinn underline the importance of story and storytelling, the crucial context journalists always need to keep in mind. Other books and tutorials merely offer step-by-step guidance to mobile technology and apps. The book synthesizes the knowledge and more than 70 years of combined expertise of two of the world's leading mobile journalism practitioners, offering sage advice and tips from people who have trained mojos in more than 20 countries. Companion Website: How-to videos on the companion website offer powerful ways for learners to absorb the content easily, walking them through the key mojo components of research, shooting, scripting, voice-over, editing and post-production.

www.routledge.com/cw/burum Ivo Burum is an award-winning writer, director and television executive producer. He has more than 30 years' experience working across genres including frontline international current affairs. A pioneer in UGS creation, Dr. Burum lectures in multimedia journalism. This is his second book about mojo. He runs Burum Media, a mojo and web TV consultancy that provides training for journalists, educators and remote communities internationally. Stephen Quinn was a journalist for 20 years before he became a university professor in 1996. Dr. Quinn taught journalism in five countries until he returned to journalism in 2011 in Hong Kong. His UK-based company MOJO Media Insights trains mobile journalists around the world. This is his twenty-first print book. He has also produced 5 iBooks. He co-writes a weekly column syndicated to seven countries.

Technology: Sorted! What's inside a laptop? How can you stuff 1,000 CDs into an mp3 player? Who built the Internet? How smart is the world's smartest robot? How do smartphones and TV remote controls work? The answers to these and other brilliant questions about technology can be found in this funny and fascinating book. Packed to capacity with megabytes of marvellous information, this book explores everything from the first simple engines to the latest gadgets, computers and networks. Technology: Sorted!
