Evolutionary history of life - Wikipedia

So we know that evolution tells us where the variety of life comes from, and why creatures are so perfectly adapted to their habitats. However, it also tells us how all life on Earth share a common ancestor, just like you and your cousins share a

common grandfather. Life on Earth began more than 3 ½ billion years ago, from the first single-celled organism to all the diverse life forms we see today.

The Evolution of Life — THE ANATOMY OF EVOLUTION

Darwin's principle of evolution is

Read Book The Evolution Of Life From Space

summarized by the following facts. All life tends to increase: more organisms are conceived, born, hatched, germinated from seed, sprouted from spores, or produced by cell division (or other means) than can possibly survive. Each organism so produced varies, however little, in some measurable way from its relatives.
