The world painted by Mannix is brilliantly told from the eyes of two animals- the fox, Tod, and the hound, Copper. Most of the world is described by smell, which would be expected of an animal who uses scent as its primary sense. This makes everything about the environment in this book unique, vivid, and quite memorable.

the Americans and British slowly learned one another's tactics, allowing the hunt between the fox (Washington) and the hound (Cornwallis). THE FOX AND THE HOUND walks readers through the early stages of the war, when gathering and distributing intelligence was a challenge without a centralized government to organize a network. Markle tells us how and why Washington created multiple intelligence-gathering departments within the colonies, which included most of the East Coast from Georgia to New Hampshire and even parts of Canada - all operating under a command structure unique to their surrounding geography. This book explores the many depths of the intelligence networks from civilian men and women who dedicated their lives to the American cause, to the introduction of code ciphers and the first spy equipment such as David Bushnell's turtle submarine and Benjamin Franklin's jet boat. Without the dedication of Washington and his innovative loyal supporters, it's quite possible that the outcome of the war may have been different. Military and American history enthusiasts will find this a valuable resource for their collections.
