Reviews — The Price of Everything

An intelligent film, ' The Price of Everything ' is also very funny – usually on purpose, though some of the art is ridiculous. There ' s a creeping sense that this buoyant market may mark the ...

The Price of Everything 2018, directed by nathaniel kahn ...

Everything has a price, but it isn't always obvious what that price is. Many of the prices we pay seem to make little sense. We shell out \$2.29 for a coffee at Starbucks when a nearly identical brew can be had at the corner deli for less than a dollar.

An assessment of the role of value in every aspect of life explains that a price is incurred for every choice, and assesses the inherent costs of such controversial topics as joining a church, promoting longevity, and organ donation.

Stanford University student and Cuban American tennis prodigy Ramon Fernandez is outraged when a nearby mega-store hikes its prices the night of an earthquake. He crosses paths with provost and economics professor Ruth Lieber when he plans a campus protest against the price-gouging retailer--which is also a major donor to the university. Ruth begins a dialogue with Ramon about prices, prosperity, and innovation and their role in our daily lives. Is Ruth trying to limit the damage from Ramon's protest? Or does she have something altogether different in mind? As Ramon is thrust into the national spotlight by events beyond the Stanford campus, he learns there's more to price hikes than meets the eye, and he is forced to reconsider everything he thought he knew. What is the source of America's high standard of living? What drives entrepreneurs and innovation? What upholds the hidden order that allows us to choose our careers and pursue our passions with so little conflict? How does economic order emerge without anyone being in charge? Ruth gives Ramon and the reader a new appreciation for how our economy works and the wondrous role that the price of everything plays in everyday life. The Price of Everything is a captivating story about economic growth and the unseen forces that create and sustain economic harmony all around us.

Everything has a price, but it isn't always obvious what that price is. Many of the prices we pay seem to make little sense. We shell out \$2.29 for a coffee at Starbucks when a nearly identical brew can be had at the corner deli for less than a dollar. We may be less willing to give blood for \$25 than to donate it for free. Americans hire cheap illegal immigrants to fix the roof or mow the lawn, and vote for politicians who promise to spend billions to keep them out of the country. And citizens of the industrialized West pay hundreds of dollars a year in taxes or cash for someone to cart away trash that would be a valuable commodity in poorer parts of the world. The Price of Everything starts with a simple premise: there is a price behind each choice that we make, whether we're deciding to have a baby, drive a car, or buy a

book. We often fail to appreciate just how critical prices are as a motivating force shaping our lives. But their power becomes clear when distorted prices steer our decisions the wrong way. Eduardo Porter uncovers the true story behind the prices we pay and reveals what those prices are actually telling us. He takes us on a global economic adventure, from comparing the relative price of a vote in corrupt São Tomé and in the ostensibly uncorrupt United States, to assessing the cost of happiness in Bhutan, to deducing the dollar value we assign to human life. His unique approach helps explain: * Why polygamous societies actually place a higher value on women than monogamous ones. * Why someone may find more value in a \$14 million license plate than the standard issue, \$95 one. * Why some government agencies believe one year of life for a senior citizen is four times more valuable than that of a younger person. Porter weaves together the constant-and often unconscious-cost and value assessments we all make every day. While exploring the fascinating story behind the price of everything from marriage and death to mattresses and horsemeat, Porter draws unexpected connections that bridge a wide range of disciplines and cultures. The result is a cogent and insightful narrative about how the world really works. Watch a Video

WINNER OF THE 2019 MADAME DE STAËL PRIZE AND THE 2018 LEONTIEF PRIZE FOR ADVANCING THE FRONTIERS OF ECONOMIC THOUGHT SHORTLISTED FOR THE FT & MCKINSEY BUSINESS BOOK OF THE YEAR 2018 Who really creates wealth in our world? And how do we decide the value of what they do? At the heart of today's financial and economic crisis is a problem hiding in plain sight. In modern capitalism, value-extraction is rewarded more highly than value-creation: the productive process that drives a healthy economy and society. From companies driven solely to maximize shareholder value to astronomically high prices of medicines justified through big pharma's 'value pricing', we misidentify taking with making, and have lost sight of what value really means. Once a central plank of economic thought, this concept of value - what it is, why it matters to us - is simply no longer discussed. Yet, argues Mariana Mazzucato in this penetrating and passionate new book, if we are to reform capitalism - radically to transform an increasingly sick system rather than continue feeding it - we urgently need to rethink where wealth comes from. Which activities create it, which extract it, which destroy it? Answers to these questions are key if we want to replace the current parasitic system with a type of capitalism that is more sustainable, more symbiotic - that works for us all. The Value of Everything reignites a long-needed debate about the kind of world we really want to live in.

Lessons from Value Investing

Presents six classic discourses on economics by Adam Smith, Thomas Robert Malthus, David Ricardo, Charles Mackay, Thorstein Veblen, and John Maynard Keynes, with brief introductions to each work.

As clinical as it sounds to express the value of human lives, health, or the environment in cold dollars and cents, cost-benefit analysis requires it. More disturbingly, this approach is being embraced by a growing number of politicians and conservative pundits as the most reasonable way to make many policy decisions regarding public health and the environment. By systematically refuting the economic algorithms and illogical assumptions that cost-benefit analysts flaunt as fact, Priceless tells a "gripping story about how solid science has been shoved to the backburner by bean counters with ideological blinders" (In These Times). Ackerman and Heinzerling argue that decisions about health and safety should be made "to reflect not economists' numbers, but democratic values, chosen on moral grounds. This is a vividly written book, punctuated by striking analogies, a good deal of

outrage, and a nice dose of humor" (Cass Sunstein, *The New Republic*). Essential reading for anyone concerned with the future of human health and environmental protection, *Priceless* "shines a bright light on obstacles that stand in the way of good government decisions" (*Public Citizen News*).

"A deeply though-provoking book about the dramatic changes we must make to save the planet from financial madness."--Naomi Klein, author of *The Shock Doctrine* Opening with Oscar Wilde's observation that "nowadays people know the price of everything and the value of nothing," Patel shows how our faith in prices as a way of valuing the world is misplaced. He reveals the hidden ecological and social costs of a hamburger (as much as \$200), and asks how we came to have markets in the first place. Both the corporate capture of government and our current financial crisis, Patel argues, are a result of our democratically bankrupt political system. If part one asks how we can rebalance society and limit markets, part two answers by showing how social organizations, in America and around the globe, are finding new ways to describe the world's worth. If we don't want the market to price every aspect of our lives, we need to learn how such organizations have discovered democratic ways in which people, and not simply governments, can play a crucial role in deciding how we might share our world and its resources in common. This short, timely and inspiring book reveals that our current crisis is not simply the result of too much of the wrong kind of economics. While we need to rethink our economic model, Patel argues that the larger failure beneath the food, climate and economic crises is a political one. If economics is about choices, Patel writes, it isn't often said who gets to make them. *The Value of Nothing* offers a fresh and accessible way to think about economics and the choices we will all need to make in order to create a sustainable economy and society.

While governments throughout the world have different approaches to how they make their public sector information (PSI) available and the terms under which the information may be reused, there appears to be a broad recognition of the importance of digital networks and PSI to the economy and to society. However, despite the huge investments in PSI and the even larger estimated effects, surprisingly little is known about the costs and benefits of different information policies on the information society and the knowledge economy. By understanding the strengths and weaknesses of the current assessment methods and their underlying criteria, it should be possible to improve and apply such tools to help rationalize the policies and to clarify the role of the internet in disseminating PSI. This in turn can help promote the efficiency and effectiveness of PSI investments and management, and to improve their downstream economic and social results. The workshop that is summarized in this volume was intended to review the state of the art in assessment methods and to improve the understanding of what is known and what needs to be known about the effects of PSI activities.

This fully illustrated catalogue is published on the occasion of *Now*, a solo show of work by Jeff Koons (born 1955) presented at Damien Hirst ' s new London exhibition space, Newport Street Gallery, which exhibits art from Hirst ' s collection. *Now* spans the duration of Koons ' career to date, and features sculpture and painting from some of his most important series, including *Inflatables*, *The New*, *Equilibrium* and *Made in Heaven*, which investigate themes pertaining to mass culture, commerce, advertising, taste, pleasure and banality. This publication also includes an essay by art critic Michael Archer and a foreword by Newport Street Gallery ' s Senior Curator, Hugh Allan.
