The Relationship Model of Addictions™ (TRMA™) humanizes addiction. TRMA™is intended for clinicians providing education, conducting assessments and formulating treatment plans. It will also prove invaluable to those in recovery and interested in learning more about addiction and recovery. For the past 65+ years, the Disease or Medical Model prevailed as the sole and primary source of education about addiction and treatment.

The Relationship Model of Addictions Humanizes Addiction
The Relationship Model of Addictions™ (TRMA™) is a new paradigm for understanding addiction, recovery and treatment that picks up where the Disease Model left off. Its intent is to humanize addiction by highlighting the emotional, psychological, experiential and relationship aspects, and one that applies to everyone and everyone can relate to.

The Absorption-Addiction Model. McCutcheon (2002) proposed that parasocial relationships form due to deficiencies in people's lives. They look to the relationship to escape from reality, perhaps due to traumatic events or to fill the gap left by a real-life attachment ending.

Relationship Theories Revision Notes | Simply Psychology
This model suggests that addictions are the result of a lifelong disease that is biological in origin and exacerbated by environmental factors. It goes on to suggest that addicted individuals are essentially powerless over their problem and will be unable to remain sober by themselves, in the same way that a person with a degenerative illness is unable to fight their disease without medication.

The Relationship Model of Addictions: A New Paradigm for ...
The Relationship Model of Addictions establishes a new standard for understanding and treating addiction. It expands the disease concept by re-defining addiction as a relationship. The model accounts for the cause of addiction as related to the preponderance of non-emotionally nourishing relationships, unmet emotional needs, the resultant pain and need to relieve that pain.

The Relationship Model of Addictions
A multinomial logistic regression analysis indicated that there was a significant relationship between source of motivation and stage of change at intake. Controlling for severity, treatment history, legal status, and primary substance use, persons entering treatment with higher levels of internal motivation were more likely to be in the action stage than the precontemplation stage.
