reporting into a powerful account of the mass extinction unfolding before our eyes Over the last half a billion years, there have been five mass extinctions, when the diversity of life on earth suddenly and dramatically contracted. Scientists around the world are currently monitoring the sixth extinction, predicted to be the most devastating extinction event since the asteroid impact that wiped out the dinosaurs. This time around, the cataclysm is us. In *The Sixth Extinction*, two-time winner of the National Magazine Award and *New Yorker* writer Elizabeth Kolbert draws on the work of scores of researchers in half a dozen disciplines, accompanying many of them into the field: geologists who study deep ocean cores, botanists who follow the tree line as it climbs up the Andes, marine biologists who dive off the Great Barrier Reef. She

introduces us to a dozen species, some already gone, others facing extinction, including the Panamian golden frog, staghorn coral, the great auk, and the Sumatran rhino. Through these stories, Kolbert provides a moving account of the disappearances occurring all around us and traces the evolution of extinction as concept, from its first articulation by Georges Cuvier in revolutionary Paris up through the present day. The sixth extinction is likely to be mankind's most lasting legacy; as Kolbert observes, it compels us to rethink the fundamental question of what it means to be human.

Over the last half a billion years, there have been five mass extinctions of life on earth. Scientists around the world are currently monitoring the sixth, predicted to be the most devastating extinction event since the asteroid impact that wiped out the dinosaurs. Elizabeth Kolbert combines brilliant field reporting, the history of ideas and the work of geologists, botanists and marine biologists to tell the gripping stories of a dozen species – including the Panamanian golden frog and the Sumatran rhino – some already gone, others at the point of vanishing. The sixth extinction is likely to be mankind's most lasting legacy and Elizabeth Kolbert's book urgently compels us to rethink the fundamental question of what it means to be human.

Draws on the work of geologists, botanists, marine biologists, and other researchers to discuss the five devastating mass extinctions on Earth and predicts the coming of a sixth.

A new edition of the book that launched Elizabeth Kolbert's career as an environmental writer—updated with three new chapters, making it, yet again, "irreplaceable" (Boston Globe). Elizabeth Kolbert's environmental classic *Field Notes from a Catastrophe* first developed out of a groundbreaking, National Magazine Award-winning three-part series in *The New Yorker*. She expanded it into a still-concise yet richly researched and damning book about climate change: a primer on the greatest challenge facing the world today. But in the years since, the story has continued to develop; the

situation has become more dire, even as our understanding grows. Now, Kolbert returns to the defining book of her career. She has added a chapter bringing things up-to-date on the existing text, plus three new chapters--on ocean acidification, the tar sands, and a Danish town that's gone carbon neutral--making it, again, a must-read for our moment.

Mankind is no longer at the top of the food chain. The Sixth Extinction is an apocalyptic tale about a pandemic that sweeps the globe, decimating the human race, leaving humanity struggling to survive. Within three weeks, everything has changed. Social structure has collapsed as the government locks itself away with a select portion of its vast army in deep bunkers, leaving the civilians to their own fate

and the infected that stalk the streets. Alex, Troy, Frank, Naomi, and the two King brothers find themselves once again running for their lives. They have joined forces with a group led by a woman called Smokie - it's a collection of women and a few men who have survived on a river in an old fishing boat, and living on an island. However, the island they presumed to be safe was overrun and they have to race along a two-mile stretch of a road full of infected to a cargo ship. They find themselves fighting for their lives on a beach, with the crashing, ice cold waves at their backs, and creatures charging from the woods ahead. Their only hope is a rigid-sided boat that will ferry them a small group at a time to the large vessel. That's if they have the strength to fight the endless wave of infected until the small boat returns for the

second group. Meanwhile, Doctor Bachman and Emma are also running for their lives from a large deformed animal that is tossing other creatures aside as if they weigh nothing. They frantically stumble into a barn full of infected cattle. Have they just raced headlong into a situation even deadlier than the one they were trying to escape from? They also discover they are not the only humans left alive in the bunker, and does this stranger hold the answers to some of their questions? Does he offer hope? Meanwhile, the creatures are amassed in the warehouse behind the largest pod, with the black spores undulating across the ceiling, all eager to head out into the world of man and let loose new strains of the infection. Will they be stopped in time, or is this truly the end of mankind - will the sixth extinction run its deadly course and wipe

Preview: The Sixth Extinction is a book by award winning journalist, Elizabeth Kolbert. In this book, the author demonstrates that species are dying out at a rate comparable to the previous mass extinctions, and if the trend of global warming, deforestation, and pollution continues in its present course, the numbers of extinct species will meet or exceed that rate of destruction. This event will include the extinction of humanity. What this means is that the current loss of life today will soon justify the term "The Sixth Extinction," a mass

extinction like the one that destroyed the dinosaurs 65 million years ago When humans originated about 100,000 years ago, they began to hunt some species into extinction. Their ability to outcompete other early hominids for food led to the extinction of those species, including Neanderthals. The extinction of species picked up steam when humans began transforming great swaths of forest and plains into farmland about 10,000 years ago... NATIONAL BESTSELLER • The Pulitzer Prize–winning author of *The Sixth Extinction* returns to humanity’s transformative impact on the environment, now asking: After doing so much damage, can we change nature, this time to save it? “Important, necessary, urgent and phenomenally interesting.”—Helen Macdonald, *The New York Times* That man should have dominion “over all the earth, and over every creeping thing that creepeth upon the earth” is a prophecy that has hardened into fact. So pervasive are human impacts on the planet that it’s said we live in a new geological epoch: the Anthropocene. In *Under a White Sky*, Elizabeth Kolbert takes a hard look at the new world we are creating. Along the way, she meets biologists who are trying to preserve the world’s rarest fish, which lives in a single tiny pool in the

middle of the Mojave; engineers who are turning carbon emissions to stone in Iceland; Australian researchers who are trying to develop a “super coral” that can survive on a hotter globe; and physicists who are contemplating shooting tiny diamonds into the stratosphere to cool the earth. One way to look at human civilization, says Kolbert, is as a ten-thousand-year exercise in defying nature. In *The Sixth Extinction*, she explored the ways in which our capacity for destruction has reshaped the natural world. Now she examines how the very sorts of interventions that have imperiled our planet are increasingly seen as the only hope for its salvation. By turns inspiring, terrifying, and darkly comic, *Under a White Sky* is an utterly original examination of the challenges we face.
